

LASER TREATMENT POST-CARE

- Redness is normal and expected for 3-5 days
- Pinpoint bleeding may occur
- Swelling is common – **Arnica OTC and an Antihistamine** (Benadryl, Claritin or Zyrtec) during the healing process will help minimize the length of time you are swollen
- Spots that look like dark coffee grounds will appear on skin. This is part of the healing process where treated tissue is working its way out of your body as new, fresh skin is regenerated. During this time, your skin will be very dry and have a sandpaper texture and will begin to flake and peel – **DO NOT PICK. This can last for up to 14 days.**
- Wash with a gentle cleanser 2x/day, apply post-care serum provided by provider, **apply SPF** every 3 hours, and wear a hat while outdoors until fully healed
- Return to your normal skincare routine after you are **fully** healed in all treatment areas
