AI for Auditors

Audit with AI and **keep your scepticism sharp.**

Designed by audit experts. Delivered by AI experts.

Apply AI to the work you already know

- Live, instructor-led training
- Applied to real audit work
- Foundational and Practitioner levels
- From single tasks to a workflow
- Guided practice and expert review

Find what deserves a closer look

Develop practical AI skills to interrogate evidence, focus your enquiries and strengthen the story your audit work tells.

Why this matters now

An audit rarely hinges on the information that is easiest to find. Gaps, inconsistencies and unexpected patterns can be just as important as the evidence in front of you. Learn how AI can help you organise and compare information, develop lines of enquiry and prepare clearer audit documentation, without treating a plausible output as evidence or weakening the professional scepticism the work demands.

Course 1

Foundational

Use AI more effectively in individual tasks

Work you'll recognise: building a first-pass evidence and question map; tracing AI claims back to the audit evidence.

You'll leave able to

1. **Use AI to support audit planning, research, evidence review and reporting**
2. **Trace AI-generated claims back to the audit evidence, and question what's missing or inconsistent**
3. **Keep professional scepticism and responsibility for conclusions before accepting an AI-supported output**

Course 2

Practitioner

Use AI to connect multiple tasks into a workflow

Work you'll recognise: designing an evidence-summary workflow from document selection to reviewer acceptance; testing exceptions and inconsistent evidence.

You'll leave able to

1. **Pick a useful AI step in evidence summaries and map its inputs and human decisions**
2. **Build and test an evidence-summary prototype on approved sources, including exceptions**
3. **Explain the review gates, permissions and evidence an audit pilot would need**

Tested working drafts and evidence for a next step, not approval to deploy.

At a glance

Learn

10 hours over two days
Live online and instructor-led

Apply

Within two weeks
In the workplace
One approved task based on real audit work
Instructor feedback

Review in group

1 hour group clinic
Live online and instructor-led
Shared peer learnings

Ongoing support

Templates, checklists and case examples available from day one, plus 90 days of support.

Ways to join

Courses run in cohorts of 15 learners.

Have enough people for a full cohort? Train your team together, on your own audit work and review standards. We can even explore tailoring.

Not quite enough people, or want to test it first? Talk to us about your team's needs.

£7,000
Full closed cohort

Cost is per course. Prices exclude VAT.

What you'll learn

Practical skills to bring AI into your role, whatever your starting point.

Course 1: Foundational

You'll learn to use AI on the task in front of you, and check the answer before you rely on it.

1. Gain confidence with AI in auditing

Find where AI helps across planning, fieldwork and completion, and write source-aware prompts that give review-ready outputs.

2. Use AI for everyday audit work

Cut audit admin with AI in your platforms, check research against ISA, FRC and firm methodology, and draft committee-ready narratives.

3. Use AI tools with audit data

Tell ledgers, journals and evidence apart, apply analytics to risk assessment and testing, and turn objectives into testable questions.

4. Use AI responsibly in auditing

Protect client confidentiality and independence, spot deepfakes and manipulated evidence, and apply scepticism before relying on any output.

Course 2: Practitioner

You'll learn to design, build and test AI-supported audit workflows, assistants and agents, with human approval before anything is released.

1. Design AI-enhanced audit workflows

Map workflows from planning to completion, pick the right tasks for AI, and set review, sign-off and tool-governance controls.

2. Build and monitor audit AI workflows

Ground reusable prompts in approved methodology, then test, monitor and measure performance before wider use.

3. Deploy AI assistants and agents

Design a bounded agent for tasks like journal-entry testing, and a methodology assistant with clear scope and fallbacks.

4. Run multi-agent systems

Assign roles for extraction, testing and exception triage, preserve evidence across handoffs and stop errors reaching conclusions.

Who it's for

Roles

Audit professionals, including associates, auditors and managers, regardless of seniority or time in role.

Starting knowledge

Complete an AI skills diagnostic before the course begins to benchmark your current capability.

Foundational requires no previous AI experience. Practitioner is for people who already use and check AI on individual tasks.

Not sure which course?

Course 1: Foundational

"I want to use AI better on the task in front of me."

Course 2: Practitioner

"I already use AI confidently on tasks, and now want it to create AI-driven processes and workflows."

Choose by your AI experience, not your seniority.

Time and support

Learn live for 10 hours

Training, guided labs and feedback take place over two days. Materials available from day one; no advance study is required.

Apply one task

Within two weeks, try a suitable task using an approved tool and permitted information, or use a supplied case. Keep your reviewed work and a question for the instructor.

Return with your questions

Join a one-hour group clinic around day 30. Use the templates, checklists, worked cases and feedback for 90 days.

See your progress

Ongoing capability diagnostics show where your skills and confidence are growing, and where to explore and practise next.

Not sure where AI fits in your work?

Here's what you could learn to do.

Foundational

Build a first-pass evidence and question map

- Frame an AI extraction and synthesis task, then inspect what it left out
- Trace every AI-generated claim back to the audit evidence
- Question what is missing or inconsistent before accepting an output

Practitioner

Prototype an AI evidence-summary workflow

- Design document selection, AI extraction, exception handling and reviewer acceptance as one process
- Test completeness and inconsistent evidence
- Set where the reviewer accepts or rejects the output

Review
Review your result with an expert

Our accelerated learning framework moves learners between focused instruction, hands-on application and structured reviews. Built on practice, feedback and repetition, it turns knowledge into reliable, in-role performance.

We train professionals at all of the Big Four, so you're learning with a provider the profession already trusts.

We train professionals in 81% of FTSE 100 companies.

Two thirds of accountants in England and Wales have studied with us at some point in their career.

Is AI adoption a whole workforce priority?

From everyday work to building AI tools and leading AI decisions, our training covers every level. Connect pathways across apprenticeships, degrees, certifications and short courses, so your people strategy keeps pace with your AI strategy.
