

LET'S GROW
TOGETHER

ALLER AQUA ANTI STRESS

Environmental conditions can negatively affect immune status and growth of fish. In particular during summer time, high water temperatures, lack of oxygen, ammonia concentration and other suboptimal water parameters can stress fish. As a consequence, the immune system of fish is challenged and may be overcome by antigens in the water (bacteria, viruses, parasites). Eventually, fish growth performance will decline.

To strengthen the immune system of tilapia during summer time, ALLER AQUA has developed an ANTI STRESS feed. The feed contains extra dosages of vitamins, antioxidants and organic acids which support fish production in many ways:

FEED

- Improved product stability
- Antimicrobial effect
- Reduction of buffering capacity
- Nutritive value of organic acids as fast as energy source

STOMAC

- Reduction of pH
- Efficient pathogen reduction
- Activation of protein digestion
- Nutritive value of organic acids as fast as energy source

INTESTINE

- Antimicrobial effects
- Barrier against ascending infections
- Better Ca and P digestion

PERFORMANCE

- Antioxidation, neutralisation of free radicals
- Reduced stress level
- Increased gut and animal health
- Faster growth

ANTI STRESS
