THE TALE OF
MR. BLUE AND MR GREEN

Is Your Fish Feed Reducing Your Profits?

Have you ever wondered why some fish farmers seem to effortlessly produce healthy, fast-growing fish, while others struggle to keep their ponds stocked? The secret might lie in something as simple as what they're feeding their fish.

The Tale of Two Farmers

Meet Mr. Blue and Mr. Green, two farmers with side-by-side ponds. They both stock their ponds with the same number of tilapia fish, but their results are vastly different.

Mr. Blue decided to use an inferior fish feed, while Mr. Green opts for a higher-quality option like Aller Aqua Til-pro. When Mr. Blue throws handfuls of his budget feed into the pond, the feed pellets quickly disintegrate and become dusty, some sinking uneaten to the bottom. He worries his fish aren't getting enough nutrients, so he feeds them more and more often. This constant feeding takes up a lot of feeds, his time and resources.

Mr. Green, on the other hand, follows the recommended feeding guide for Aller Aqua Til-pro. The high-quality pellets are firm, less dusty and have a high water stability so that the fish have time to find and eat them before they dissolve. This minimizes waste, keeps your water quality and ensures his fish get the complete, balanced nutrition they need. This result in superior Feed Conversion Ratio (FCR).

Feeding high-quality Aller Aqua Til-pro ensures good health benefits for your tilapia fish. It also ensures a high survival rate and a uniform growth, so more fish can be sold at the end of the production cycle.
Mr. Green spends less time feeding and enjoys faster optimal fish growth.

The Power of Aller Aqua Feed Conversion Ratio (FCR)

Here's the science behind **Mr. Green's success**: high-quality Aller Aqua Til-pro feeds give a better Feed Conversion Ratio. This means it takes less feed to produce 450g of tilapia fish.

Mr. Green's fish, efficiently converting nutrients into growth, reach market size in just 6 months! This allows him to complete 2 production cycles in a year, and quickly increase his profits. Mr. Green's responsible feeding practices not only benefit his pocket but also the environment. Low-quality feed pollutes the pond and harm the environment. By minimizing waste, Mr. Green keep his pond healthy and sustainable.

The Choice is Yours

Just like Mr. Green, you too can improve your farming business. Invest in high-quality Aller Aqua feeds. While you will pay more for each bag, its superior FCR and reduced wastage will lead to faster, uniform growth and high survival rates for your fish, helping you to make significant cost savings and higher profits in the long run.

Remember, we can grow "faster" together!
