Investment strategy

The Sygnum Platform Winners Index ETP tracks the financial performance of the most widely accepted native crypto assets of original protocols.

The MOON ETP is based on the first index to track native blockchain protocol tokens using a fully rules-based approach. Sygnum's selection, weighting, and regular rebalancing of protocol tokens in the index is based on a holistic set of factors to achieve intelligent market exposure. These factors are capital

invested, financial market interest, ecosystem growth, and developer resources committed. This methodology and a quarterly rebalancing ensure that the portfolio stays invested in the most relevant tokens and develops over time.

Risk/return profile

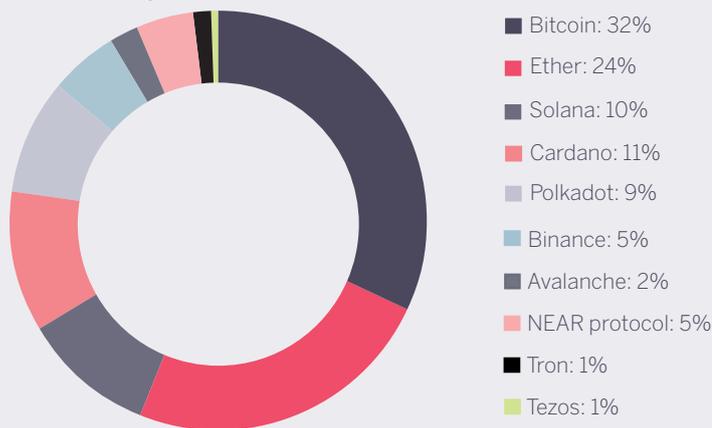

The product aims to achieve significant returns through capital appreciation of its token investments. Due to the directional market exposure of the strategy, the product has high volatility and drawdown risk.
