

Lesson 2: Design your own farm.

Computer lab or laptops needed.

<p>Starter</p> <p>Video/ Presentation (11mins)</p>	<p>In the video Educational Facilitator Lauren Roberts will introduce the online game “SIM Farm”. It explains how to access the free game and some pointers about how to play.</p> <p>https://lincoln.ap.panopto.com/Panopto/Pages/Viewer.aspx?id=0ef950ec-503d-4615-8e16-abb20027acc4</p>
<p>Activity</p>	<div data-bbox="580 589 1225 987" data-label="Image"> <p>The image shows the 'SIM FARM' logo. It features the words 'SIM FARM' in a green, blocky font on a white banner. Below the banner is a stylized illustration of a black and white cow in a green field with a yellow sun in the background. To the left of the cow are three red tomatoes. The entire logo is framed by a wooden border with visible screws.</p> </div> <p>Students access SIM Farm webpage and have a go designing and managing their own farm. You can assign different “L2_Farm_Conditions” so there is a range of environmental conditions and students can compare their experiences.</p> <p>https://www.myabandonware.com/game/sim-farm-204/play-204</p>
<p>Questions</p>	<p>In pairs or groups get them to answer the following questions so they can reflect and learn from each other’s experiences.</p> <ul style="list-style-type: none"> • Did the environmental conditions that you chose work well for your dairy farm? Why/ why not? • How did you access water? (<i>bore or water pump from lake/river</i>) • Does this farming system reflect the NZ farming system? (<i>No as we do not need to feed our cows all the time as they eat pasture – USA has a greater dependence on feeding out = harvested crops like grain</i>). • What was a good “learning experience”? (Something that went wrong that you learnt from)
<p>Exit Pass</p>	<p>Each group to share their learning experience.</p>

Note: Some students may play farming simulator in their spare time and although it is very detailed the farming system is American and is not representative of a New Zealand pastoral based farming system. They also need to spend a lot of time harvesting crops and doing duties at set times which means it can be difficult to do it in a lesson, get an overview of the farming system and to try out different scenarios.
