

# PRODUCT UPGRADE

## LIGHTNING ALERTS

Our offshore energy team is excited to launch and make a smart new feature for our Lightning Alerts product now available.

The upgraded flexible proximity parameters give a smarter, more advanced capability than the standard radius parameter.

This feature provides greater accuracy and granularity to support you in your operational decision-making.

Dashboard and workspace view of the lightning alert proximity. The circle represents the standard radius proximity. The three polygons represent the smart upgrade proximity option.

### KEY FEATURES AND BENEFITS

- // Set the proximity directly around your assets
- // Geographical separation
- // Set the proximity to the coastline
- // Assist in saving costs for projects and operations
- // Seamless integration into your existing workspace portal

## GET IT NOW!

Contact your StormGeo team member for more details on how to upgrade now and for a short demo on the feature.
