

Weather Intelligence for

Educational Services

// Critical alerting, monitoring and planning for school districts, colleges and universities

Ensure safety of students and staff

Advanced monitoring & alerting for all-weather events

Location specific weather conditions for multiple points

Easy to read dashboards and maps

Critical decision-making based on precise, point location weather information is necessary to determine delays and closures to avoid endangering students and staff. StormGeo's advanced forecasting capabilities allow educational leaders to confidently evaluate conditions and make informed decisions based on scientific data and expert insights.

Key Features and Benefits:

- // Web-based dashboard displays current and forecast weather threats for multiple fixed asset locations with intuitive color-coded, traffic-light indicators.
- // Identify threatened locations with risk and timing information for severe weather conditions including: heavy rainfall risk, snow risk, flood risk, wind risk, severe thunderstorm risks and more
- // Dependable access to expert meteorologists 24/7/365 to guide you through the forecast and provide insights.

”

StormGeo was incredibly helpful in providing clear, usable information to inform decision makers during our conference call.

Severe Weather Alerting & Monitoring

Flooding, lightning, wind and snow can cause delays and closures for schools and school events. StormGeo provides site-specific alerts, forecasts and planning tools to protect your students, faculty and facilities during all-weather events.

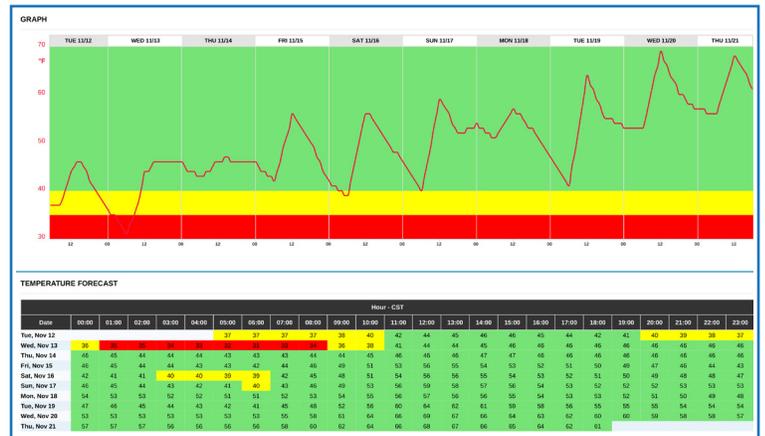

StormGeo Vortex Portal showing Lightning Proximity Alert with All Clear count-down timer.

Critical Temperature Advisory

Extreme hot and cold temperatures can have a significant impact on students, staff, facilities and equipment. Critical Temperature Advisories provide a 10-day forecast with hourly weather windows, color-coded to easily identify the days and times when extreme temperatures are beyond acceptable parameters.
