

CAP 437

Refresher for Offshore Meteorological Observers

Refresher Course for Meteorological
Observers in Support of Offshore
Helicopter Operations

Meteorological Observer Refresher Training in support of Offshore Helicopter Operations

Introduction

The Civil Aviation Authority document 'CAP 437 Offshore Helicopter Landing Areas – Guidance on Standards' contains the following:

- The requirements for accurate timely and complete weather observations to be made using automated sensors.
- The use of visibility and cloud base information derived from automated sensors within a 10 mile radius.
- Recommendation for certificated training of offshore personnel who undertake weather observations.
- Increased supply of offshore MET information using web based systems.

A set of training requirements have been established in order to provide sufficient knowledge for offshore personnel who carry out weather observations (Met Observers) in order to provide accurate weather reports to the standards necessary to ensure the safety of helicopter operations. Those observers who have successfully completed the two day Met Observer course and have been awarded a meteorological observing certificate, are required after two years to complete a refresher course to update their observer certificate.

Refresher Training Course Overview

Refresher training is provided by StormGeo either online or via a one day taught refresher.

The course is designed to refresh the Met Observers training certificate and ensure that they continue to be capable of providing both a pre-flight weather report issued before take-off, and on request, a radio message detailing the current weather on the helideck.

Having completed the full two day training course, the refresher training takes the delegate through a series of modules and test questions relating to key aspects already covered as part of their original training including; Wind, Visibility, Present Weather, Cloud, Temperature, Pressure and Sea state.

Online Refresher - The delegate is required to complete a set of practice questions within each of the modules during which they are referred to relevant sections of the original course material allowing them to refresh their knowledge of the original course.

On finishing the online course modules they are required to complete a test comprising of a number of questions relating to the sections they have completed revision on. On successful completion of the refresher course test, their answers are reviewed by the course training team at StormGeo and a refresher certificate is issued to the delegate which is valid for a further two years.

One day classroom taught refresher - for details of the timetable and dates, please send a request by email to alan.binley@stormgeo.com

For further information on the two day course and the requirements relating to offshore meteorological observers in accordance with CAP 437, please refer to the observer training prospectus available on www.stormgeo.com or on request by email from alan.binley@stormgeo.com

Training Objectives

This course will enable the participants to:

- Update their appreciation of the importance of accurate offshore weather observations
- Refresh their understanding of the requirements and skills needed to produce these
- Remind them of the basics of the UK's weather and its potential impact on offshore helicopter operations
- Ensure they can correctly observe the visual elements of the observations and understand their potential impact on offshore helicopter operations
- Find relevant reference materials to ensure correct encoding of weather observations

The Training Course

For the online refresher training, all course material, test questions and the final examination are contained within the online portal. Delegates should allow approximately 3 hours to complete the course from start to finish, although it is possible for delegates to complete the course over a longer period if required.

The course will conclude with a short test which personnel must pass in order to complete the course successfully.

For the one day taught refresher, reading material is issued in advance to enable delegates to refresh their knowledge prior to the classroom training. The course will conclude with a short test which personnel must pass in order to complete the course successfully.

Successful delegates will then be awarded a refresher certificate to update their existing meteorological observer's certificate which is specific to the support of helicopter operations as defined in CA P437. The certificate will be valid for a further two years from date of completion of the course.

StormGeo Ltd.

StormGeo is the fastest growing and one of the world's largest commercial weather service providers, serving a worldwide customer base with advanced solutions through our global 24/7 forecasting desks.

StormGeo has been approved by the UK Civil Aviation Authority (CAA) to provide courses for Offshore Meteorological Observers. All personnel successfully completing this course will have met the refresher requirements contained within CAP437 for Meteorological Observers and approved by the CAA.

All StormGeo trainers are qualified meteorological observers with experience working at commercial airports. In addition they all have experience of North Sea weather forecasting and the course leaders are qualified trainers.

Refresher Training Course Prices for 2022

Each refresher online licence costs GBP 310 plus VAT

Course Requirements:

- Prior to the refresher course the delegate must have already successfully completed a certified two day Met Observer Training course
- For the online refresher the delegate will require access to a computer with an internet connection for the duration of the training with a minimum screen resolution of 1024 x 768.
- The following web browsers can be used:

Microsoft Internet Explorer 6 or higher
Mozilla Firefox 2 or higher
Apple Safari 3 or higher
Google Chrome 8 or higher
Opera 10.6 or higher

Bookings

For all booking enquiries or to reserve a place on any of the above courses please telephone or email Alan Binley at:

StormGeo Ltd.
Unit 6, Kingshill Park,
Venture Drive,
Arnhall Business Park,
Westhill, Aberdeenshire,
AB32 6FL, UK.

Email: alan.binley@stormgeo.com

Full details on how to access and activate the online course licence are provided on receipt of booking.

StormGeo

StormGeo is a global provider of advanced analytics and meteorological services delivering decision support for weather sensitive operations. Since its inception StormGeo has analyzed petabytes of data, transforming it into actionable decision guidance to help our customers manage risk and operations, control costs and increase revenue. The company has a leading position in solutions for shipping, offshore oil and gas, renewable energy and corporate enterprise business continuity. StormGeo has 23 worldwide offices of which 7 are 24/7/365 operation centers spanning all geographical areas of the world. StormGeo is a ISO-9001 certified company. For more information visit stormgeo.com or email info@stormgeo.com.
