Suicide is a public health problem and leading cause of death in the United States. Suicide can also be prevented – more investment in suicide prevention, education, and research will prevent the untimely deaths of thousands of Americans each year. Unless otherwise noted, this fact sheet reports 2020 data from the CDC, the most current verified data available at time of publication (February 2022).

**Suicide Data: United States**

45,979 Americans died by suicide making it the 12th leading cause of death.
- 3rd leading cause of death for ages 10-19
