# Cholesterol Test

Lab test

Blood

Name: **Dummy Persson**    Date of test: **04/16/2021**    Analysis-ID: **TZRP4D9S-CH**

## Your test results

Our lab has tested the concentration of your blood lipids and you will find your results below.

Blood lipids	Your value	Reference value
Cholesterol (total)	 6.2 mmol/l	$\leq 5,0$ mmol/l
LDL-cholesterol	 4.39 mmol/l	$< 2,60$ mmol/l
HDL-cholesterol	 1.17 mmol/l	$> 0,65$ mmol/l
LDL/HDL ratio	 3.8 mmol/l	$< 3,0$ mmol/l
Triglycerides	 1.3 mmol/l	$< 1,7$ mmol/l

\*The reference values apply to adults.

## About cholesterol

Cholesterol is a waxy substance found in all cells and is essential for the production of hormones, vitamins, and bile acids. It is also a major component of cell membranes. Cholesterol is transported in the blood by lipoproteins, which are particles of fat. There are two main types of lipoproteins: low-density lipoprotein (LDL) and high-density lipoprotein (HDL). LDL is often referred to as "bad" cholesterol because it can build up in the arteries, leading to atherosclerosis and heart disease. HDL is often referred to as "good" cholesterol because it helps remove LDL from the arteries.

Cholesterol is essential for the production of hormones, vitamins, and bile acids. It is also a major component of cell membranes.
