4mm HD Arthroscopes

Our high definition endoscopes use a complex proximal and distal sapphire window system that is scratch free, fogs less and prevents corrosion and fluid invasion.

Our low-maintenance non coated stainless steel body is resistant to corrosion, rust and staining.

We include three light cable adapters, allowing compatibility with ACMI®, Richard Wolf® and Karl Storz®.

Our scope body and sheath are laser-welded tightly to ensure that all parts are properly secured together.

Our scratch-resistant insulated synthetic ocular objective and distal sapphire-window prevents internal glass corrosion to ensure a clear, precisely defined image.

The Strauss Linear Line[®]

When performance is on the line, go Linear.

The Strauss Linear Line of knee arthroscopy instruments is a model of thoughtful design and manufacture. Built for comfort and performance, no hinges or pins ensures high durability without compromising strength or cutting precision. The aerospace-grade aluminum handle reduced overall instrument weight by 60%; enhancing maneuverability while helping to lessen grip fatigue. The entire line features the lowest tip profile of open shaft instruments – with open-shafts that are easier to clean and sterilize.

Straight

The primary style for a direct approach.

Upbiter

An angled tip increases access to the posterior meniscus.

Upswept

An angled shaft follows the contour of the condyle and keeps the cutting surface parallel to the tibial plateau.

Curved left and curved right

Angled to reach the anterior and posterior meniscus.

Classic Handle

Scissors, basket punches and graspers are equipped with traditional classic handle.

Slide-Lock Handle

All graspers are equipped with this infinite-position locking-handle design.

Rotatable Handle

Available on rotary basket punches and scissors.
