

GETTING STARTED ON BUPRENORPHINE: Conventional Initiation Method for New Patients

Patient Name

Provider Name_____

Date____

For conventional initiation, it is essential that your last use of opioids is 18-72 hours before your first dose of buprenorphine AND you are starting to feel moderate symptoms of withdrawal such as restlessness, sweating, muscle aches, vomiting, diarrhea, and anxiety. The longer you can wait before your first dose of buprenorphine after your last use of opioids, the greater likelihood you'll successfully initiate using the conventional method.

If you use short-acting opioids like Percocet (oxycodone), Hydrocodone, Heroin, or Kratom Stop use **18-24 HOURS before** your first dose of buprenorphine. **If you use long-acting opioids or Fentanyl** Stop use **36-72 HOURS before** your first dose of buprenorphine.

After 18-72 hours have elapsed since your last use (depending on the type of opioid) and you are feeling withdrawal symptoms, follow these instructions:

72)

Take 2mg of buprenorphine (follow instructions at the end of this guide), and wait 60-90 minutes.

After 60-90 minutes, if you do not feel severe withdrawal symptoms, take another 2-4mg dose of buprenorphine.

Continue to take 2-4mg doses every 60-90 minutes up to the daily amount prescribed to you by your provider.

Note: If you experience severe withdrawal symptoms, wait 4-6 hours before attempting another 2 mg dose <u>or</u> reach out to the Nurse Care Team at 1-877-522-1275 to discuss an alternative initiation method.

Earliest Buprenorphine Start Time

Start taking buprenorphine no earlier than (time) _____ on (day) _____

Additional Prescriptions (circle all that apply)

You have also been prescribed medication for overdose and withdrawal symptoms.

Medications for most patients:

Narcan (naloxone) in case of overdose (see instructions on last page) **Clonidine** for restlessness, hot flashes, shakiness, tremor, sweating,

goosebumps, runny nose, tearing

Vistaril (hydroxyzine) for anxiety **Zofran** (ondansetron) for nausea **Neurontin** (gabapentin) for restlessness, anxiety,

sleep disturbance

Additional medications for some patients with targeted symptoms:

Bentyl (dicylomine) for abdominal cramping Advil/Motrin (ibuprofen) for muscles aches, joint pain, and headache Remeron (mirtazapine) for insomnia

Daily Dose (Day 2 and Onward): Take _____ mg once daily

Prescription Pick-Up

Your prescription should be filled within 6 hours at your selected pharmacy. If your prescription is not ready for pick-up within 6 hours, please call 1-877-522-1275 (press option #1, then #3).

Next Visit

You should plan to return to Ideal Option (check one):

□ Twice Per Week □ Once Per Week

Please schedule your next visit for (date): _

Nurse Care Manager

Your Nurse Care Manager will check in with you regularly to answer questions about dosing and/or withdrawal symptoms. You can reach out to a nurse at any time by calling 1-877-522-1275 (press #1, then #6).

WHAT IS BUPRENORPHINE?

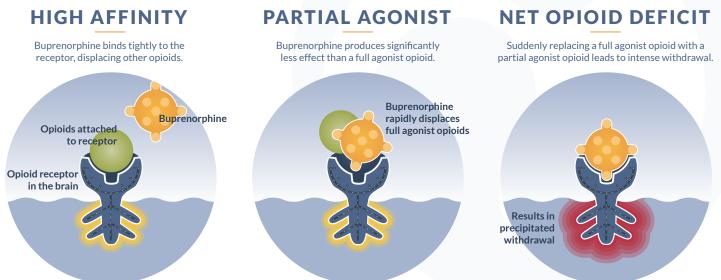

Buprenorphine (Suboxone[®], Subutex[®], Zubsolv[®]) is a safe and effective medication that will help you stop using opioids like fentanyl, heroin, and pain pills.

The first phase of treatment with buprenorphine is called "initiation" and can last up to 7 days or more. When doing initiation at home, it's important to get the timing and dose of buprenorphine right, so you don't enter **precipitated withdrawal**.

WHAT IS PRECIPITATED WITHDRAWAL?

Precipitated Withdrawal is an extreme form of withdrawal that can happen quickly if you take too much buprenorphine too soon. It results in severe pain and symptoms such as fever, muscle aches, vomiting, and diarrhea. Here's how it can happen:

Conventional Instructions

HOW TO TAKE BUPRENORPHINE

BEFORE

These may reduce or block absorption of your medication.

DOSING

Drink a few sips of warm water before taking your medication.

Place film strip or tablet UNDER your tongue and let it dissolve completely.

When completely dissolved, set your timer for 15-20 minutes.

DO NOT spit, swallow, eat, smoke, vape, or drink during this time.

After 15-20 minutes, spit out any remaining saliva. Then, take a large sip of water and swish it around your teeth and gums. After rinsing, spit out the water; do not swallow it.

Repeat the steps above for each film strip or tablet.

AFTER

For **30 MINUTES AFTER** dosing, **DO NOT:**

Drink any liquids

Eat any foods

Use tobacco or vaping products

These may reduce or block absorption of your medication.

1 HOUR AFTER dosing, **DO**:

Brush your teeth to remove any traces of the medication.

REMINDERS

- **Don't combine opioids with other substances.** The use of opioids, including buprenorphine, with alcohol or sedatives such as benzodiazepines (Xanax, Ativan, Valium), nerve pain medications (Lyrica, Gabapentin), and prescription sleep medications (Ambien, Lunesta) may increase the risk of respiratory depression, which can be fatal.
- **Avoid other opioids.** When using the conventional initiation method, any other medication or substances that contain opioids should be avoided, unless approved by your provider.
- **Check before starting new medications.** Speak with your provider before starting any new medication while taking buprenorphine.
- **Safe storage is critical.** Store your prescriptions away from other people, especially children, preferably in a secure location such as a lockbox or safe. We cannot replace lost or stolen medication.
- Use Narcan or Kloxxado in the event of an overdose. First, call 911. Then, gently insert the tip of the nozzle into one nostril until your fingers on either side of the nozzle are against the bottom of the person's nose. Press the plunger firmly to give the dose of the nasal spray. Remove the nasal spray from the nostril after giving the dose. Repeat every 2-3 minutes until the person responds.
- **Protect your teeth.** Buprenorphine may cause tooth decay. After the medicine has been under the tongue for 15-20 minutes and is completely dissolved, spit out any remaining saliva. Then, take a large sip of water and swish it around your teeth and gums. After rinsing, spit out the water; do not swallow it. Wait one hour before brushing your teeth.
- **Community resources.** Ask the front desk for information on recovery support services in your local community.
