CASE STUDY

Global Biologics Facility: Acoustic performance and seamless technology integration with Focus Quiet Rooms

This newly renovated global biologic development and commercial manufacturing facility houses engineers and scientists dedicated to the process and production of high-quality biotherapies.

Located in the North American state of Washington, the organisation was seeking a solution that could deliver a mix of private offices and meeting rooms for individual and group work.

Schiaavello's Focus Quiet Rooms were one of several products considered during the selection process, standing out for its ability to resemble a built-in architectural solution rather than a standalone pod or booth. The collection offers a wide selection of finishes and allows for bespoke configurations, further enabling tailored design outcomes.

Focus Quiet Meeting Room

Acoustic performance and seamless technology integration were key priorities for this project, especially due to a number of Focus Quiet Meeting Rooms being designated as private offices. A high acoustic rating ensured minimal disruption across teams and individuals, with a strategic use of shared walls between Rooms preserving acoustic quality while improving material and cost efficiencies.

Beyond budget efficiency, Schiavello's Focus Quiet Rooms brought versatility to the workplace — with the chosen mix of Phone and Meeting Rooms supporting quick video calls, one-on-one meetings, and larger collaborative sessions. Their modular design empowers the organisation to reconfigure spaces easily, accommodating future growth and evolving work styles.

Working with the client, dealer, builder and trades on the integration of technical services was also central to the project's overall success, reflecting Schiavello's commitment to deliver quality, tailored solutions through unrivalled end-to-end service.
