Control Box Reset Prodecure

OPERATION

FACTORY RESET/RESTART

Reset control box to its original factory settings

If the system malfunctions or displays "E00," a reset is required.
This is also necessary for first-time use.

1. Remove any object higher than 600mm from below desk before initiating the Factory Reset.
2. Press and hold **Λ** and **V** buttons, hold until beep confirms reset. The display will show the starting height, confirming reset completion.

PRESS

DISPLAY

Quick Tips

1. **Accidental Settings:** Don't hold buttons too long or press multiple buttons randomly, it can cause unwanted settings to be stored in memory, such as height limits.
2. Any error codes, **Try Resetting First**, all other error codes please refer to full User Manual.
3. **Information is Key:** For further technical problems, contact your Schiavello sales consultant, share all issue details, symptoms and error codes for faster solutions.
4. The control box can only be reset using a display memory switch as pictured.
5. The menu timeout is 5 seconds, this means that the menu will close automatically without storing new settings if the user does not press a key for 5 seconds.

DANGER
If one or more motors are changed in a system, the control box must be reset to factory settings and a manual reset has to be performed.
