ALLER AQUA FISHING INTRODUCTION

Our history

It all started with PASSION.

A passion for fishing. The product line of Aller Aqua Fishing has been carefully selected by renowned anglers and industry specialists, who understand fishing and know it is more than just a hobby. The selection guarantees satisfying results and the most enjoyable fishing experience throughout the seasons regardless of weather conditions. That's why when offering our pellets we say - ENJOY YOUR PASSION!

Where does the quality come from?

Our products come from aquaculture, and their composition is made with high quality raw materials which ensure palatability and stable composition. What does it mean for the fish? It means they are naturally drawn to them and enjoy their taste, just as anglers enjoy their fishing experience while using them.

Who are we?

Aller Aqua Fishing is the brand of one of the biggest global feed producers, Aller Aqua. The company specializes in the production of feed for aquaculture and has been supplying high-quality aquafeed for over 30 different species to more than 70 countries for more than 60 years. The experience gained throughout that time has made Aller Aqua an expert in fish feeding. With such extensive experience and knowledge, we have decided to turn our eyes to the anglers market, because we are aware of how important it is to use the best baits and pellet products possible.

PRODUCT RANGE

How are our pellets different from one another?

Our pellets are divided based on their energy. Low energy pellets are intended to be used in cold water, whereas high energy are mostly intended for warmer waters. Our offer also includes pellets which can be successfully used throughout the season.

However, we encourage you to try different combinations and mix pellets for maximum efficiency!

Moreover, all our pellets have the following properties:

- ✓ **Sinking**
- ✓ **PVA-neutral**
- ✓ **Suitable for feeder / method / groundbait use**
- ✓ **Can be customized in terms of flavours, colours and paste conversion**

Explore our products

Pellet stability time in warm water

Includes ingredients that make the pellet highly attractive to fish

Sinking pellet

Can be perforated and hooked

PRODUCT RANGE FOR COLDWATER

Aller Top

Stable in warm water for up to 3 - 6 h.
