

Hydra 460 by ROTO Nautica. Steady. Stylish. Simple.

Düsseldorf, Germany, January 17th 2026 – Slovenian boatbuilder ROTO Nautica, a recognized leader in advanced polymer engineering, unveiled the HYDRA 460 at its world premiere at BOOT Düsseldorf. Technologically refined and elegantly styled, the HYDRA 460 delivers exceptional stability, smart functionality, and elegant design to deliver a confident and comfortable on-water experience for both recreational and professional users.

Developed at ROTO Nautica's in-house development department, the HYDRA 460 is aimed at boaters who value style, agility, and easy handling. Measuring 4.6 meters in length with a beam of 1.8 meters, and a lightweight construction weight of just 320 kg the boat achieves impressive performance with smaller outboard engines – reducing fuel consumption and operational costs without compromising speed or responsiveness.

The HYDRA 460 represents the next evolutionary step in Roto Nautica models. Its refinement delivers excellent stability, balance, hydrodynamics, and a safe and confident ride in a wide range of conditions.

The HYDRA 460 features an ergonomic layout improves weight distribution, driver protection and overall driver experience. The generously sized helm seat accommodates two people and features a flip-up backrest and longitudinally seat adjustment. Practical storage solutions include dedicated compartments for the anchor, fender, ropes as well as an optional sundeck box which also serves as a relaxation area. For extended cruising range, an optional 50L fuel tank is also available.

Engineered to achieve an optimal balance of stability, efficiency, and simplicity, the HYDRA 460 builds on a proven platform. The result is a boat with enhanced ergonomics, a fresh visual identity, and effortless usability.

„The HYDRA 460 is engineered to be steady, stylish, and simple, delivering a refined on-water experience. True refinement is defined not by complexity, but by stability and confident control on the water. I am confident, that driving a Hydra will bring you smile on your face“, **said Matjaž Pavlinjek, CEO of Roto Nautica.**

All boats in the ROTO Nautica range are distinguished by their unique manufacturing process. Built using rotational moulding multi layer technology, they offer exceptional structural rigidity, high impact resistance and long term durability against corrosion and UV exposure, while remaining fully recyclable.

Along side the HYDRA 460, ROTO Nautica also presented two further models: the KOR KYRA 650 Pro and the HYDRA 530.

The Korkyra 650 Pro showcases a highly refined modular concept design for professional and multi-purpose use. It's specialized bow structure and an innovative front loading platform enables safe access and efficient cargo handling for professional operations, transport services, diving activities, and users with reduced mobility. The model supports greener mobility through the integration of solar roofs and electric propulsion systems, increasing overall energy independence. Its intelligent versatility design sets new benchmarks in both recreational and commercial applications.

The Hydra 530 represents the pinnacle of ROTO Nautica's design and engineering philosophy. Its innovative Air Step hull technology, it reduces hydrodynamic drag, for faster planing, quieter and stable ride with lower energy consumption. The monolithic construction with integrated longitudinal kiss-off profiles ensures exceptional structural rigidity and safety, even in demanding conditions delivering precise helm control and outstanding comfort for passengers.

The Hydra 530 has earned recognition across Europe, earning multiple national and international awards, including a Certificate of Excellence, the Golden Innovation Award of the Slovenian Chamber of Commerce, and finalist at the Best of Boats Awards in the Best for Beginners 2025 category.

A Legacy of Excellence – ROTO Nautica and the ROTO Group

ROTO Nautica is a young dynamic brand bringing fresh ideas and sustainable solutions to the nautical world with a portfolio ranging from 4.5 to 9.5 meters. ROTO Nautica is an integral part of the international ROTO Group, a family-owned company with more than 75 years of tradition, headquartered in Murska Sobota, Slovenia. This unique combination of youthful innovation and industrial expertise - supported by ten production facilities worldwide - enables high-precision industrial know-how into boat development. With more than 4.400 products and numerous national and international awards, the ROTO Group ranks among the leading global specialists in polymer manufacturing.
