

Premium Grandstand

NUSSLI

The Premium Grandstand is an advanced modular grandstand system and has been put into practice on major international events. It meets the latest requirements of the FIFA, UEFA, IOC and other international sports federations.

Sustainable, flexible, high-quality and cost-effective concept design though to installation. With a row depth of 80 cm, the NUSSLI Premium Grandstand system offers a generous passage width with plenty of leg space. Together with the well-designed tip-up seats, it provides a great deal of comfort and safety for spectators. The high-quality, anti-slip grandstand flooring also dampens the noise due to the use of suitable materials. With its premium workmanship, modern design, and great flexibility, it is particularly suited for major international events and as a VIP grandstand.

Ensuring the best view

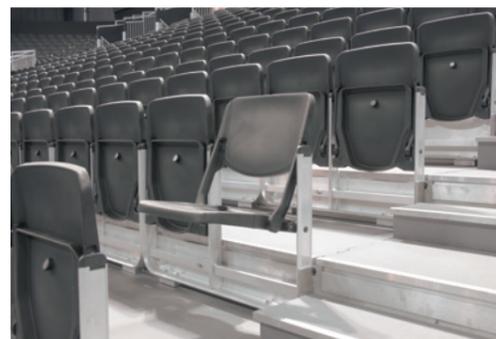

The Premium Grandstand from NUSSLI offers optimal viewing conditions for all spectators thanks to a variety of standard inclines.

The upper structure of the NUSSLI Premium Grandstand offers the greatest level of flexibility both where the arrangement of sectors as well as positioning of stairs are concerned. With segment-shaped flooring boards, polygonal grandstands with closed corners can be built. Staircases can be constructed as openings or add-on structures.

The substructure of the NUSSLI Premium Grandstand consists of a modular support frame which offers maximum flexibility for all topographical situations. Longitudinal and lateral transverse support beams ensure the dimensional stability and rigidity of the grandstand system.

The benefits

- Fulfills the requirements of international sports federations
- 80 cm seat row depth for plenty of legroom and maximum safety
- Comfortable, ergonomically shaped tip-up seats
- Durable non-slip decking
- Highly aesthetic yet comfortable
- Various rises for optimized sightlines
- Custom configurable spectator area
- Plan views with polygonal corners
- Modular substructure, versatile on any kind of terrain

Ergonomically shaped premium folding seats.

Individually configurable layout for seats and grandstand stairs, even in corners.

Specifications

Comfort

Legroom	Most comfortable grandstand on the market. An 80 cm row depth ensures generous legroom.
Seating comfort	Ergonomically shaped tip-up seats of the latest design guarantee a high level of comfort and generous passage widths.
Footfall dampening	Particularly suited for sporting and cultural events. Thanks to the use of certified materials, only a small amount of noise emission results from footfall.
Access for all	Accessible-friendly design with wheelchair and companion seating.

Flexibility

Indoor/Outdoor	The grandstand can be used both outdoors and indoors, also on uneven and difficult terrain. All components are weatherproof.
Scalable	The system is suitable for events of all sizes. Thanks to the modular system, the spectator area can be custom configured.
Lines of sight	Optimal sightlines for spectators due to a parabolic grandstand gradient.
Practical	Quick assembly and dismantling. Most of the individual components can be assembled by hand.

Safety

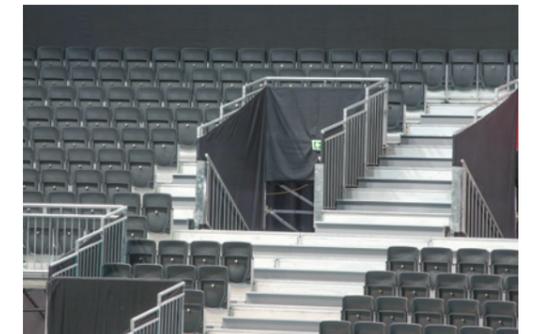

Highest standards	The grandstand complies with the highest safety standards, e.g. the generous passage width for quick evacuation, anti-slip flooring due to a special coating, child-proof railings, as well as edge protectors and face coverings on the steps.
Fire and safety requirements	Complies with fire and safety requirements; e.g. size and arrangement of escape routes and exits.
Fire protection	Use of non-flammable and/or flame-retardant materials.
Structural engineering	Structural engineering certification in accordance with prevailing standards that takes into account load capacities, wind loads, and earthquake stresses.
Standards / Inspection logs	International approval of the system. Officially reviewed inspection logs. Design complies with EN standards and the Green Guide.

Sustainability

Reusability	All components are long-lived and can be reused over many years.
Permanence	Thanks to the solid and robust workmanship, the grandstand system can not only be used for short- and medium-term purposes, but also serve as a semi-permanent structure that can later be dismantled.
IOC-compliant	Modern, contemporary and IOC-compliant design.

Comfortable 72 cm passage width between the rows.

Freely positionable 2- or 3-stage staircase openings ensure optimal traffic flow.

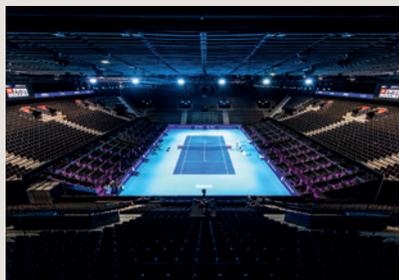

Anti-slip flooring, intermediary steps with edge protectors and robust railings provide grip and safety.

Configurations and options

- Seating: Tip-up or upholstered VIP seat. Both weather resistant and available in black or white
- Integrated row- and seat numbering
- Complete or partial roofing for rain and sun protection
- Access freely configurable as integrated staircases in the tier and/or as add-on structures
- Plan views with polygonal corners for the integration of individual corners, horseshoe-grandstands, amphitheatres, or even complete arenas
- Aesthetic fabric or wood cladding which can be printed on
- Add-on and ancillary structures for VIP boxes, hospitality areas, seats for the press, commentator boxes, direction and camera platforms, elevators, ramps etc.
- Integration of containers or room modules into staging structure; e.g. for materials storage, cloakrooms, sales booths etc.

Reference projects

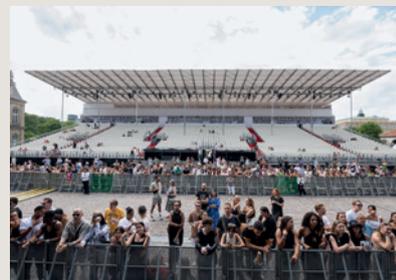

We currently have more than 300,000 seats worldwide. Our proprietary grandstand systems are the result of decades of experience and constant optimization. They are the trendsetters in terms of sustainability, creativity and complexity.
