

PRESS RELEASE 03.02.2026

SISU AUTO and ST ENGINEERING SIGN EXPRESSION OF INTEREST AT THE SINGAPORE AIRSHOW ON 3 FEBRUARY 2026 TO ADVANCE TECHNOLOGY COOPERATION

A long-standing partnership and complementary strengths position both organisations well to jointly develop advanced Arctic-capable mobility platforms suited for operations in Finland, Singapore, and wider international markets.

The Finnish-manufactured SISU GTT, a new-generation articulated tracked vehicle, provides a strong foundation for technological cooperation, including the development of the TAURUS remotely operated and autonomous vehicle system. Sisu Auto and ST Engineering will jointly showcase these products at GRIFFIN 2026 and other events throughout year 2026.

The Expression of Interest for collaboration was signed by Mr. Timo Korhonen, Chairman of the Board of Sisu Auto and Mr. Tan Pek Tong, Dy President, International Business, ST Engineering Land Systems.

Sisu Auto and ST Engineering Land Systems have previously collaborated on the development of the SISU GTT vehicle. This cooperation combined the core design solutions of ST Engineering's battle-proven Bronco all-terrain tracked carrier with Sisu Auto's specialised Arctic vehicle engineering expertise and the SISU GTP product family technologies. The result was the next-generation SISU GTT, an articulated tracked vehicle meeting the demanding performance and environmental requirements of Arctic operations.
