# Emerging Privacy Trends for 2022

With new privacy laws in California, Colorado, and Virginia coming into force in 2023, and 10 other states considering legislation in their 2022 sessions—it's clear privacy regulations here to stay.

Organizations are facing challenges and roadblocks when it comes to privacy and consumer data rights, yet many have a substantial knowledge gap when it comes to compliance.

As privacy regulation and enforcement increases, filling this knowledge gap is imperative.

That's why Pulse and Transcend surveyed 100 decision makers from Fortune 1,000 companies, and B2C companies with $1B+ in annual revenue, to understand their privacy challenges and how confident they are in their organization's compliance, current and future privacy budgets, and their use of third party privacy tools.

Data collection: November 10 - December 16, 2021 Respondents: 100 technology leaders in North America

## Organizations continue to struggle with data privacy compliance

As data privacy regulation and enforcement increases, only 27% of decision makers feel completely confident that their organization is in total compliance with global privacy laws. A majority (72%) feel only moderately confident they are compliant.

**What is your current confidence level that your organization is in total compliance with global data privacy laws globally?**

Only one in ten respondents are not at all concerned about upcoming regional data privacy laws, leaving a large majority who are concerned to some degree about their organizations future compliance.

**Are you concerned about your organization's ability to remain compliant through any additional regional privacy laws in the next 18 months?**

As fragmentation of data privacy law accelerates across the United States, 68% agree or strongly agree their organization is not able to keep up with the challenges and complexities of compliance.

**To what extent do you agree with the following statement: "Because of the increasing fragmentation of data privacy laws across different regions, my organization is concerned we are not agile or prepared enough to remain in compliance."**

Only 10% of respondents believe their organization is agile and prepared enough to remain in compliance.

**Why are you disagree with the previous statement? (n = 51)**

## As privacy requests increase, a solution that requires little oversight would be most ideal for ensuring compliance

Privacy request volume isn't decreasing. Only 2% of respondents have seen a decrease in privacy requests from their customers or users over the past 12 months, while a majority (64%) have seen an increase.

**Thinking about the past 12 months, how has the volume of privacy requests / data subject requests from your customers or users changed?**

Of the privacy request/data subject request solutions in the market, many still require a high level of involvement and oversight to operate, say technology leaders surveyed. A compliance product that requires little administration (31%) or completely hands-free process (29%) would be most effective for ensuring organizational compliance, according to decision makers.

**Which of the following do you believe would be most effective to ensure your organization doesn't violate a data privacy law?**

## Automating privacy request workflows is a top priority for decision makers

**Please rank the following items on your privacy agenda in order of priority**

## Most privacy request workflows still require manual intervention, throttling scalability in the event of an influx of requests

Few organizations have a fully automated privacy request process, and nearly one in four organizations require a person to complete each request from start to finish.

**How automated is your current privacy request / data subject request process?**

Almost one-third of organizations currently do not have a plan in place if a data breach or business event leads to a spike in requests.

**Does your organization have a plan in place to handle a spike in requests caused by a data breach or bad press?**

## Almost half (40%) of technology leaders are planning to increase both headcount and budget for privacy-specific roles and technologies in 2022

**Do you expect your headcount for data privacy-specific roles to grow in 2022?**

Overall, more than half (57%) of respondents expect their budget for privacy-specific technologies to increase.

**As compared to 2021, how do you anticipate your 2022 budget at your organization for data privacy infrastructure to change?**

## When evaluating privacy solutions, automation and simple integration are most important

Automating manual processes is the top feature decision makers want from a data privacy solution. Easy integration into their existing tech stack and outright security were the next most important features.

**Please rank the top 3 most important features/benefits you look for when evaluating data privacy solutions for your organization.**

Current tools for privacy request fulfillment and compliance show room for improvement, with only 5% of privacy professionals completely satisfied with their current third party solution.

**If you currently use a third party tool for privacy request fulfillment and compliance, how satisfied are you and your teams with it?**

## Technical teams are increasingly involved in decision making when it comes to privacy operations and compliance infrastructure

As privacy requests increase and new regulations emerge, technical teams will be tasked to untie the CIO and CISO role shouldering the responsibility. In fact, 43% of respondents have a Chief Privacy Officer overseeing their privacy and compliance function.

**Who oversees your privacy and compliance function?**

**Respondent Breakdown**

**Location**

**Company Size**

**Title**

**Transcend is the privacy platform that makes it easy to encode privacy across your tech stack.**

We help companies build privacy center UIs with a fully automated, easy-to-use operating system. Transcend Privacy Requests automatically fulfills data subject requests inside companies, across all of their data systems and vendors, for compliance like the European Union's GDPR, California's CPRA, and more. Transcend Consent is a lightweight bundle that goes beyond cookies to ensure nothing is tracked without user consent, all without sacrificing site performance or DX.

With Transcend's industry-leading software, companies go far beyond the patchwork compliance and manual offerings of today – paving the way for the future of privacy.
