Description

A sensory board for creative play with a sound that enhances the creativity and sensory experience of children, including those in wheelchairs. It includes thousands of tiny stainless steel balls that drop from the top to the bottom, providing a mesmerizing visual and tactile experience. Additionally, the board consists of an easy-to-use, rotating hourglass that can be set and reset for timed activities with a 30-second interval. The board's structure is made of powder-coated black steel, weatherproof, and ready for intensive use. The board is made of HDPE plastic. The poles are finished with spherical decorative elements.

With this sensory board, children will be able to develop their fine motor skills, hand-eye coordination, and imagination, all while having fun in a safe and inclusive environment.

If you prefer, you have the option to mount the board directly onto the wall. In this scenario, rather than relying on metal legs for ground-based support, we offer specialised mounting elements designed specifically for wall installation.

Available panel colors: green, yellow, red, blue.

Product details

- Dimensions (LxWxH): 0.90 x 0.10 x 1.25 m
- Safety area: 3.90 x 3.10 m
- A certificate confirming compatibility with norm EN 1176

Materials

- The structure is made of black, powder-coated steel,
- Structure color [RAL]: 9006,
- The board made of HDPE 15 mm,
- The playing panel is made of HDPE board,
- Shatter-proof polycarbonate window,
- Stainless steel balls.
