

Welcome to Lagoon and Thank You for Coming!

This guide provides an overview of accommodations and facilities available to our guests with a disability, their families, and friends, while visiting Lagoon Amusement Park.

Our goal is to have Lagoon free of barriers as we continually work to make the Park more accessible for all of our guests. Our Hosts and Hostesses are here to assist you and to make your visit with us more enjoyable. We encourage guests with a disability to ask any Host or Hostess for assistance at any time.

If you have suggestions, questions, or comments, we would like to hear about your visit. We invite you to please stop by **GUEST SERVICES**, located at the Park Front Entrance, and let us know how we're doing.

In advance of your visit, please contact us at **(801) 451-8000** or lagoonpark.com for questions.

General Information

A GUIDE FOR GUESTS WITH A DISABILITY

The suggestions on the following pages are the result of a cooperative effort involving a panel of park guests with disabilities, our Lagoon staff, and amusement park experts. This guide is a supplement to Lagoon's Park Map and Information Guide, Guest Rules and Code of Conduct, and is available at all Park Front Entrances, Ticket Windows, and Guest Services, and online at www.lagoonpark.com. Please note that information is subject to change.

Lagoon strives to provide mainstream access wherever possible. To serve you better, accommodations have been made throughout the park to make your visit a fun and memorable experience.

SUPERVISING COMPANION

Certain restrictions on some rides, devices, and attractions require children under 48 inches in height to ride with a "Supervising Companion" who meets all the criteria for riding alone. The Supervising Companion agrees to accompany rider(s) under their care and is reasonably expected to promote the use of good judgment and appropriate behavior and actions. Supervising Companions are expected to ride in close proximity to rider(s) under their care.

Explanation: "Appropriate behavior" may include, but is not limited to, maintaining proper riding position, attention, and compliance to oral and written safety warnings and instructions prior to and during participation, proper use of all ride and/or safety equipment, and a willingness to participate.

PARKING (STANDARD PARKING RATES APPLY)

Parking facilities for guests who are non-ambulatory or who are traveling with personal wheelchairs are available a short distance from the Park Front Entrance. Availability is on a first-come-first-served basis. Guests should inquire at the Auto Gate for directions and parking options. Please note: A fee is required to park in a "preferred" parking space.

PARK ENTRANCE AND EXIT

Guests using wheelchairs, may enter through Gate #9. Exit gates will accommodate all guests and wheelchairs.

FIRST AID/SAFETY & SECURITY

Lagoon's First Aid facility is located East of the Park Front Entrance.

FOOD SERVICE FACILITIES

All food service locations provide access for guests with disabilities. Designated eating areas have been provided for guests using a wheelchair. If assistance is needed, please contact a Lagoon Host or Hostess.

GUEST SERVICES OFFICE

Please feel free to request specific information about accommodations for guests with a disability at the Guest Services Office, located at the Park Front Entrance.

RENTALS

A limited number of wheelchairs are available for a daily charge at Strollers 'N Stuff, adjacent to the Park Front Entrance. Wheelchairs, Strollers, and wagons are rented on a first-come-first-served basis, and

may not be reserved in advance.

RESTROOMS

Restrooms are available throughout Lagoon. Please consult the Park Map for locations. While all restrooms were built to meet the building code requirements at the time of construction and have facilities for guests with a disability, all locations have larger stalls which may better accommodate guests who use wheelchairs.

TELEPHONES

Telephones are located on the south side of the midway, just inside the Park Front Entrance.

ENTERTAINMENT THEATERS

Lagoon show areas are wheelchair accessible. At the Carousel Theater, 20 minutes prior to performance time, seating is available on a first-come-first-served basis.

HAUNTED ATTRACTIONS

All haunted walk-through attractions during Frightmares provide access for guests with a disability and are wheelchair accessible. If assistance is needed, please contact a Lagoon Host or Hostess.

MERCHANDISE AND GAMES

All shops and games provide access for guests with a disability. If assistance is needed, please contact a Lagoon Host or Hostess.

SERVICE ANIMALS

Service animals are allowed in most locations throughout the Park. Animals must receive proper care, must be leashed by a maximum 6 foot leash at all times, and may not be left unattended. Animals may not be tethered to trees, park fences or ride queues. Rides are not designed to accommodate animals and will not be permitted to board rides, devices, or attractions. Due to health and safety concerns, service animals are discouraged within the confines of Lagoon A Beach, The Robert E. Freed Memorial Fountain, and if permitted, must remain a minimum of 10 feet from the water at all times. Animal owners are responsible for the care and clean-up of their animal's waste. Lagoon is neither in control of nor responsible for the behavior of a guest's animal, including any damage or injury resulting from a guest's animal.

SMOKING/VAPING POLICY

By law and for the comfort of all Park guests and employees, smoking/vaping is permitted only in designated smoking areas. Smoking/vaping is not permitted inside any building, restroom, picnic terrace, ride queue, or within Park midways, Kiddieland, and Lagoon A Beach. For the convenience of guests who smoke/vape, smoking/vaping is permitted in the parking lot and "Sit & Smoke Stations" conveniently located throughout the Park. Please consult the Park Map for locations.

(Continued on Page 4)

General Information

RIDES AND ATTRACTIONS

Lagoon's rides and attractions are accessible to guests with a disability. Lagoon's rides have signs posted at the main and alternate entrances which describe the sensations that may be experienced during the ride. In addition, "Fun and Safety Guide Signs" are located at ride entrances to assist in evaluation of the experience relative to one's individual physical condition. Each guest must recognize that forces created by some rides may aggravate temporary or permanent physical conditions. All guests with a disability, whether permanent or temporary, including recent surgery, brace, cast, pregnancy, etc., must use common sense in determining whether to enter a ride, in consideration of their disability and/or physical condition. Eleven basic rules apply to all of Lagoon's rides, devices, or attractions.

1. Each guest must meet posted height requirements and/or must be accompanied by a supervising companion, when required.
2. Each guest must comply with all warning, rule, and instruction signs present at the ride, device, or attraction.
3. Each guest must meet and abide by the criteria noted on the "Fun and Safety Guide Signs" posted at the entrances to each ride, device, or attraction.
4. The design of certain rider safety restraints will accommodate guests of average physical stature and body proportions. Large guests (in terms of height and/or weight and/or size) or guests of unusual body proportions may be unable to ride some attractions. Restraint systems must secure, lock, and engage as designed.
5. Each guest must be free of impairments, such as cast or brace, which would inhibit or prevent normal seating or securing of the seat restraint. Guests must be able to use the safety devices which are provided, such as seat restraints, and/or lap bars.
6. Each guest must have the ability to maintain riding posture and brace themselves throughout the course of the ride against potential forces created during the experience and/or, by other participants.
7. Guests who are observably under the influence of illegal drugs, alcohol, or certain prescription drugs shall not be permitted to board any ride, device, or attraction when perceived to be impaired.
8. Granting access to the ride shall not compromise the safety or welfare of other guests or employees.
9. Smoking/vaping, food and drink are not allowed on any ride, device or attraction, or in queue lines.
10. All carry on items which cannot be appropriately and safely stowed must be left with a non-rider or in a locker.
11. Shirt and shoes must be worn by guests at all times when participating on any ride, device, or attraction.

PROSTHETIC DEVICES

Guests with any type of prosthesis should not ride Lagoon's amusement rides, devices, or attractions unless they can ensure their prosthesis is properly secured and will remain in place during participation. If there is any concern that the device may become dislodged during the course of the ride, guests should visit the Guest Services Office for assistance.

Guests with prosthetic devices which do not have exposed metal parts or materials that have the potential to damage fiberglass slides or other equipment are generally permitted on all Lagoon A Beach attractions. Please consult Lagoon A Beach management prior to riding to assist you in having a safe riding experience.

AMUSEMENT RIDER RESPONSIBILITY STANDARD AND PROTOCOL

1. There are inherent risks in the participation in or on any amusement ride, device, or attraction.
2. Amusement rides, devices, and attractions may be stressful and may physically and mentally startle, surprise, thrill or exhilarate guests.
3. Guests best know their own capabilities, limitations, and health. Some amusement rides, devices, and attractions may be unsuitable for some guests due to individual abilities in this regard. Guests participating in or on an amusement ride, device, or attraction should not engage beyond their capabilities, limitations, or health, nor by their choices create risks to themselves or to others.
4. Guests should ensure they understand signs, warnings, and precautions. If they do not understand any sign, warning or precaution, guests should seek assistance from the Ride Operator before participating.
5. Guests should ensure they understand safety equipment and how to use it. If they do not understand or the safety equipment does not properly fit, guests should seek assistance from the Ride Operator before participating.

FUN & SAFETY GUIDE SYMBOLS

The **Fun and Safety Guide Symbols** shown below have been designed to assist in evaluation of the attraction relative to one's individual physical condition. These symbols are located at every ride entrance and indicate certain physical conditions that may be aggravated or affected by that ride.

All **Fun and Safety Guide Symbols** are posted as a recommendation.

If you have any questions regarding the Fun and Safety Guide Symbols, please feel free to ask a Ride Operator.

AS A MATTER OF COURTESY

It is important to note that although our Ride Operators are eager to make your day as pleasant as possible, they are not trained in lifting or carrying techniques, and therefore cannot provide physical assistance. Lagoon recommends that guests with a disability have someone accompany them to the Park who is familiar with their needs and can provide assistance. In some cases, it may be expected that guests may need the assistance of a member of their party to help them transfer from a wheelchair into a ride boarding area or from a ride boarding area to a wheelchair.

General Information

Additionally, due to the complexity of certain wheelchairs, ride attendants are not permitted to move wheelchairs from the ride boarding area. A member of the guest's party must be available to move the wheelchair to a designated wheelchair parking area. Some rides have auxiliary entrances for guests who use wheelchairs. Newer rides, devices, and attractions are constructed to accommodate guests using wheelchairs through the standard queue entrance. Auxiliary entrances are provided for your convenience and are not intended to bypass waiting in the standard queue.

Guests who use wheelchairs or possess a "Ride Accessibility Pass" may enter the ride through the auxiliary entrance, along with up to three (3) additional members of their party. If the guest's party is larger than four (4) guests, the other members of the party will be required to enter through the standard queue. *If the guest with a Ride Accessibility Pass chooses not to ride, the guest's additional member must wait in the standard queue.

If no one in your party is available to wait in the standard queue, please identify the guest who would be directly in front of you in the standard queue and inform the Ride Operator to mark your place in line. Upon reaching the auxiliary entrance gate, report to the Ride Operator and confirm which guest you identified to establish your position in the queue. When that guest reaches the loading station the Ride Operator will admit your party to the next available seats or ride carrier. Guests concerned about their ability to wait in line are encouraged to use a wheelchair or speak with a Guest Services Representative to determine eligibility for a "Ride Accessibility Pass". Please note that the distances between rides and attractions in the Park are often greater than the length of the queue lines. We kindly ask all guests to show courtesy and respect toward others, as unsafe, illegal, or offensive behavior will not be tolerated.

*If guests have accompanying members of their party in the standard queue, the Ride Operator will allow them to enter the auxiliary entrance once they have reached the loading station.

RIDE ACCESSIBILITY PASS PROGRAM

Lagoon's goal is to provide equal access and convenience for guests by issuing a "Ride Accessibility Pass" to those who qualify. This special pass provides streamlined authorization and identification for guests with disabilities, mobility restrictions, or conditions such as Autism Spectrum Disorder (ASD) to access all rides and attractions through designated auxiliary entrances.

Guests must meet all riding requirements for the ride, device, or attraction, including height and with consideration of medical/physical conditions, to participate. Auxiliary entrance access is limited to guests with disabilities, mobility restrictions, or ASD and up to three (3) additional members of their party. If the guest's party is larger than four (4) guests, the other members of the party will be required to enter through the standard queue. Service animals are not permitted. Other guests requesting to use an existing auxiliary entrance may be permitted to do so according to this policy. Ride, device, or attraction exits may not be used for entrance unless specifically designated and posted with a sign stating this use is authorized.

If any guest needs to use an auxiliary entrance, please obtain a "Accessibility Guide for Guests with Disabilities" available at the Guest Service Office adjacent to the Park entrance. This Guide, (also available on Lagoon's website at the bottom of the page under Guest Policies), details ride, device, and attraction entry guidelines and procedures, and provides specific information related to each ride, device, and attraction.

Additionally, all rides, devices and attractions have signs posted at the main and auxiliary entrances including "Fun and Safety Guide" signs. These signs provide information about the sensations and experiences riders may encounter, helping guests assess the suitability of each attraction based on their personal physical condition.

To obtain the Ride Accessibility Pass:

1. The Ride Accessibility Pass may be used on all rides. It is provided for guests' convenience and is not intended to bypass waiting your turn in the standard queue.
2. Guests with disabilities, mobility restrictions, or ASD should visit the Guest Service Office upon entry to the Park.
3. Guest Services staff will assist in verifying the guest meets the physical requirements necessary to safely enjoy Lagoon's rides, devices, and attractions.
4. If qualified, the guest will receive a "Ride Accessibility Pass," allowing access to auxiliary entrances for the guest and up to three (3) accompanying party members. If your party is larger than four (4) guests, the other members will be required to enter through the standard queue.

The Ride Accessibility Pass utilizes a "Virtual Queue" system. Guests must follow these steps to participate:

1. Upon entering the Park, visit the Guest Service Office to qualify for and receive a Ride Accessibility Pass.
2. After obtaining the Ride Accessibility Pass, proceed to the chosen ride and check in with the attendant to receive a return time.
3. The ride attendant will complete the Ride Accessibility Pass, retain it temporarily, and provide a "Return Time Card" to the guest. This card will indicate the guest's scheduled return time and include instructions to return with their entire party (limited to the guest and up to three additional members).
4. Guests may only hold one active "Return Time Card" at a time.
5. At the scheduled return time, present the "Return Time Card" to the ride attendant. The card will be collected, and the Ride Accessibility Pass will be returned to the guest before boarding.

(Continued on Page 6)

General Information Continued

(Continued from Page 5)

Guest's Not Participating in the Ride Accessibility Pass Program:

- All guests with a disability, whether permanent or temporary, including recent surgery, cast, pregnancy, etc., must use the main or auxiliary entrances.

- If members of your party are in the standard queue, the ride attendant will coordinate entry, allowing those at the auxiliary entrance to board when the party waiting in the standard queue reaches the loading station.

- Guests waiting in the auxiliary queue may also identify with the Ride Operator another guest in the standard queue to mark their appropriate position in line. When the identified guest has reached the loading station, the Ride Operator will admit your party

to the next available seats or carriers. A guest may wait comfortably away from the queue area before boarding. Please make these arrangements with the attending Ride Operator.

Important Note: Auxiliary entrances are provided for convenience and accessibility, not to bypass waiting in line. Guests must wait their turn, consistent with the standard queue system.

RE-RIDE POLICY EXCEPTION

Lagoon has established an exception to the "No Re-Ride" Policy for guests who use wheelchairs for mobility, guests who have obtained a Ride Accessibility Pass, or other guest who experience significant physical difficulty boarding Lagoon's rides, devices and attractions. These guests will be granted a single, consecutive re-ride upon request. This courtesy may also be extended to three (3) additional members of their party who originally accompanied the guest during the first ride, in the same seating section. Changing riding companions on a re-ride will not be permitted. The re-ride policy does not include X-Venture Zone Attractions without the pre-purchase of an additional ticket.

DECIDE BEFORE YOU RIDE

Prior to boarding any ride, all guests should evaluate the ride during its complete loading, operating and unloading cycle, from their personal perspective and consider their own individual talent and capabilities. This evaluation should include:

1. The ability to withstand the forces resulting from the ride action.
2. The ability to comprehend how to load, unload, and participate on the ride, including certain effects the ride will produce.
3. The ability to brace, as needed, against certain ride effects.

While participating on some rides, guests with sight impairments may not be able to fully anticipate the forces and movements to which their bodies will be subjected and are, therefore, advised to take this into consideration when deciding whether or not to participate. Guests with sight impairments may not drive vehicles at Boomerang or Double Thunder, or carry non-collapsible

walking aides onto some rides. A limited number of Braille Guidebooks are available to rent on a first-come, first-serve basis at Guest Services.

Instructions to riders are provided verbally by ride operators at some rides. Guests who have a hearing impairment may request a written version of these instructions at the ride. Please make this request to the Ride Operator before boarding.

Before riding, please inform the Ride Operator of specific needs or extra time that may be required to board or exit the ride. Lagoon Ride Operators may make the final decision of ride eligibility with the safety of Lagoon's guests being their highest priority.

EVACUATIONS

Evacuations may be required due to such causes as unexpected technical issues, weather conditions, or an interruption of electrical service. It is important to realize that there is a remote chance that a situation may arise that requires some walking or may require riders to be removed from a vehicle or carrier during the course of a ride. If evacuation is required, guests may need to maneuver across catwalks, from the highest point of the ride, and down steeply inclined catwalks, ladders or steps. Ride carriers may also stop at the top of lift hills or during the ride course due to mechanical reasons. Although these incidents are rare, please be aware of this possibility and use discretion and good judgment before boarding.

If evacuation from an amusement ride, device, or attraction is required, for safety reasons, ambulatory guests may be evacuated prior to evacuating disabled guests. In this case, disabled non-ambulatory guests accept any risk or danger due to delayed evacuation or due to the necessity of physically lifting or lowering as part of the evacuation.

Ride by Ride Information for Guests with Disabilities

The following information is provided to assist you in evaluating each ride and attraction.

AIR RACE

This ride delivers an exciting ride experience combined with an impressive visual impact; it takes riders on an amazing journey which replicates the thrill and sensations of an acrobatic airplane flight, with banks, loops, dives, and weightlessness that will test even the most enthusiastic thrill seekers. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 48 inches in height may not ride.

Wheelchair Access: Entrance is via the main ride entrance located on the south side of the ride. Exit is via the exit gate opposite the entrance. This ride is equipped with a special seat which has a detachable side. This detachable side permits a guest using a wheelchair to more easily transfer from the wheelchair to the seat and vice versa. Please notify the Ride Operator for assistance.

BABY BOATS

This is a children's ride consisting of miniature boats floating on water, pulled around an oval course.

Height Restriction: Maximum height limit of 46 inches.

Wheelchair Access: Entrance and Exit is via the exit gate located on the southeast side of the ride. Please notify the Ride Operator for assistance.

THE BAT

This ride is a suspended coaster featuring a compact layout with numerous elements including valleys, banked turns, a carousel section, and more. The ride is monitored by an automatic, computerized safety system, which may unexpectedly stop the train on the lift hill or stopping brake at the end of the ride. Please take into consideration the possibility of stopping on the lift hill or stopping brake when deciding whether or not to participate. It may become necessary to unload guests from the lift hill or brake. This may include the use of stairs or ramps. Guests with any type of lower prosthesis should remove their prosthesis prior to riding. When

seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 42 inches in height may not ride.

Wheelchair Access: Entrance is via the main ride entrance located on the west side of the ride. Exit is via the access gate located adjacent to the exit turnstile. Please notify the Ride Operator for assistance.

BOMBORA

This ride is a state of the art, dynamic coaster with high speed thrilling elements including sudden drops, tightly banked turns, compound spirals, and more. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Bombora is monitored by an automatic, computerized safety system which may unexpectedly stop the train on the lift hill or in the stopping brake at the end of the ride. Please take into consideration the possibility of stopping on the lift hill or stopping brake in deciding whether or not to participate. It may become necessary to unload guests from the lift hill or stopping brake. This may include the use of stairs. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests between 36 and 48 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Guests under 36 inches in height may not ride.

Wheelchair Access: Entrance and Exit for this ride is via the exit ramp walkway. This ride is equipped with a special seat which has a detachable side. This detachable side permits a guest using a wheelchair to more easily transfer from the wheelchair to the seat and vice versa. Please notify the Ride Operator for assistance.

BOOMERANG

The Boomerang is more commonly referred to as the bumper cars. There are 40 cars each with a capacity of two riders. Guests participating on this ride may experience unexpected movement and/or forces created by the cars bumping into each other. Guests with sight impairments may not drive vehicles. The operating features of this ride require that the driver be able to reach and operate both the steering wheel and foot pedal to drive the car.

Height Restriction: Guests under 46 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via an access gate adjacent to the ride entrance. Please notify the Ride Operator for assistance.

Ride by Ride Information for Guests with Disabilities

BULGY THE WHALE

This is a children's ride which undulates and rotates on an up and down track.

Height Restriction: Maximum height limit of 54 inches.

Wheelchair Access: Entrance and Exit is via the exit gate located on the west side of the ride. Please notify the Ride Operator for assistance.

CANNIBAL

This ride is the tallest, fastest, and possibly most thrilling roller coaster at Lagoon. Cannibal riders will first encounter, enveloped in darkness, a one-of-a-kind 200+ foot vertical "lift" within an enclosed tower. The Cannibal vehicle will plunge over the edge into a beyond vertical freefall, the searing speed culminating with travel through an underground tunnel. Other amazing features follow including an Immelmann-like loop, switchback roll, and double helix around and through a 60 foot waterfall. Cannibal has numerous inversions and many other thrilling elements.

Cannibal is monitored by an automatic, computerized safety system which may unexpectedly stop or slow your vehicle during the lift cycle within the tower, or in the interim block or reduction brake areas. Please take into consideration the possibility of stopping within the tower or in the interim brakes when deciding whether or not to participate. It may become necessary to unload guests from the vertical tower or interim brake. This may include the use of stairs, lift, or ramps.

Height Restriction: Guests under 48 inches in height may not ride. When seated, both legs must extend from underneath the closed restraint and at least one leg must fit underneath the shin guard. Due to the nature of the restraint, this ride may not accommodate guests of a larger size. A test seat is located at the ride entrance which can be used to evaluate proper fit and comfort prior to waiting in line.

Wheelchair Access: Entrance and Exit is via an access queue line located at the main entrance of the ride. This ride is equipped with a special seat which has a detachable side. The detachable side permits a guest using a wheelchair to more easily transfer from the wheelchair to the seat and vice versa. Please notify the Ride Operator for assistance.

Cannibal utilizes electromagnetic devices. According to the U.S. Food and Drug Administration (FDA), electromagnetic interference can affect various medical devices including cardiac pacemakers and implantable defibrillator. Most current research in this area

focuses on high frequency sources such as cellular telephones, microwave signals, and radio and television broadcast transmitters. Cannibal utilizes various sized electric motors, switches, computers, special eddy current brakes, and other electrical equipment that produce electromagnetic fields (EMF's). Testing has shown that these EMF's are far below the threshold limits advised by makers of medical devices and are much lower than many common household items. Each person's individual situation is different and riders with medical devices are advised to seek the medical opinion of their doctor concerning the effects of EMF's on Cannibal with regard to the limits established by manufacturers of medical devices used.

CATAPULT (X-Venture Zone)

Participants are harnessed into a capsule and then launched and propelled in a vertical trajectory. Participants experience acceleration up to 5 G's, speeds up to 100 miles per hour, weightlessness, and a very exciting ground rush. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 46 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via an access gate and ramp near the entrance to the attraction. Please notify the Ride Operator for assistance.

A velcro leg strap is provided for guests who do not have full use of, or muscle strength/control of their legs. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Once transferred from their wheelchair, the Ride Operators will secure the riders' legs to the capsule, located just below the seat, with the velcro strap.

CENTENNIAL SCREAMER

This ride is a spinning disc that begins by revolving on its side. As the centrifugal forces increase, the spinning disc rises to a near vertical position. When seated, leg(s) form a lap.

Height Restriction: Guests under 46 inches in height may not ride.

Wheelchair Access: Entrance is via the main entrance located on the west side of the ride. Exit is via the exit ramp walkway located on the east side of the Ride. Please notify the Ride Operator for assistance.

Ride by Ride Information for Guests with Disabilities

DINOSAUR DROP/LADYBUG BOP

This ride consists of two semi-independent vertical towers. It is a family ride that may appeal to all ages. The ride has five double seats attached to a motorized ring driven up, down, and around each vertical tower. Each seat is equipped with an adjustable seat restraint. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests between 36 and 42 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Guests under 36 inches in height may not ride.

Wheelchair Access: Entrance is via the main ride entrances. Exit via an access gate located near the operator. Please notify the Ride Operator for assistance.

DOUBLE THUNDER RACEWAY (X-Venture Zone)

This attraction consists of two go-cart tracks. Each gasoline fueled go-cart is driver controlled and provides seating for one driver, and in some go-carts, one rider. Guests with sight impairments may not drive vehicles. The operating features of this ride require that the driver be able to reach and operate both the brake and gas pedals, and steer the vehicle.

Height Restriction: Guests must be 54 inches in height to drive, and riders must be 40 inches in height to ride.

Wheelchair Access: Entrance and Exit is via an access gate located on the north side of the pit adjacent to the Ride Operator. Please notify the Ride Operator for assistance.

DRACULA'S CASTLE

Carriers travel through darkened halls, with frights and surprises around every corner. This is a relatively slow and level ride.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via an access gate near the ride loading station. Please notify the Ride Operator for assistance.

DRAGONFLY

This ride consists of 24 seats, suspended by chains from three arms which rotate around a center mast. Riders experience a smooth orbiting ride with mild centrifugal forces. Ride seats may swing from side-to-side during the ride. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion.

Wheelchair Access: Entrance and Exit is via the ride exit. Please notify the Ride Operator for assistance.

ENGINE 86

This ride is a beautifully decorated family ride themed as a fire truck. In a pendulum motion, Engine 86 swings riders forward and back, then over the top. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 36 inches in height must sit on the inside seat position and be accompanied by a supervising companion in the adjacent seat. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance is through the main entrance located on the east side of the ride. Exit is via the exit gate located just west of the ride enclosure. This ride is equipped with a special seat that has a detachable side. This detachable side permits a guest in a wheelchair to more easily move from the wheelchair to the carrier and vice versa. Please notify the Ride Operator for assistance.

Ride by Ride Information for Guests with Disabilities

THE FIRE DRAGON (COLOSSUS)

This ride is a high speed, double looping steel roller coaster. When seated both leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size. The ride is monitored with an automatic, computerized safety system, which may unexpectedly stop the train on the lift hill, in the stopping brake at the end of the ride, or in one of the two staging brakes prior to the main station. Please take into consideration the possibility of stopping on the lift hill or in one of the brake sections when deciding whether or not to participate. It may become necessary to unload guests from the lift hill or brakes. This may include the use of stairs or ramps.

Height Restriction: Guests between 46 and 50 inches in height must be accompanied by a supervising companion. Guests under 46 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via the exit ramp located on the south side of the ride. Please notify the Ride Operator for assistance. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

FLYING ACES

Finned planes spin in a circle, rising to a height of 25 feet. Riders control the plane how high or low the ride carrier sails by operating a large "wind fin". Centrifugal forces are produced by this ride.

Height Restriction: Guests under 46 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via the exit gate located on the north side of the ride. Please notify the Ride Operator for assistance.

FLYING TIGERS

The Flying Tigers is a beautifully decorated airplane themed ride. Suspended from above on an oval track, 8 airplanes fly, climb, and dive, creating an exciting whip action for great fun.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance is via the main ride entrance located on the northwest side of the ride. Exit is via the exit gate located east of the entrance gate. Please notify the Ride Operator for assistance.

JUMPING DRAGON

This ride has two-seat gondolas that travel along an undulating track creating a rapid up and down rider experience. The ride quickly accelerates, and will run both forward and backward. Considerable centrifugal force is created by this ride. Seats are equipped with an adjustable, locking restraint to securely hold riders. Each gondola may accommodate two riders, adult and/or child. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 46 inches in height must sit on the inside seat position and be accompanied by a supervising companion in the adjacent seat. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance is via the main ride entrance located on the southwest side of the ride. Exit is via the exit gate next to the entrance. This ride is equipped with a special seat that has a detachable side. This detachable side permits a guest in a wheelchair to more easily transfer from the wheelchair to the carrier and vice versa. Please notify the Ride Operator for assistance.

KONTIKI

This ride is a swinging and rotating boat ride with six bench seats that face toward the center of the boat. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 46 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via the exit gate located on the west side of the ride. Please notify the Ride Operator for assistance.

LAGOON A BEACH

For those contemplating use of Lagoon A Beach water slides and attractions, please recognize that forces created by slides and attractions may aggravate some physical conditions, making them inappropriate for some persons with certain disabilities.

Height Restriction: Guests under 46 inches and 50 inches in height may not participate on certain slides. Maximum weight 300 lbs.

Wheelchair Access: Access to the Lazy River is via the transfer step located on the east side or a ramp located on the south side of the river. A water compatible wheelchair is available upon request. Access to Blue Lagoon is via a self operated transfer seat located on the east side of Blue Lagoon. Entrance for slides and attractions requires climbing stairs. Approved flotation devices are

Ride by Ride Information for Guests with Disabilities

MERRY-GO-ROUND

This traditional, antique carousel operates at a quick pace. Belts are provided on the animals, but not on the bench seat or the spinning wheel. An adult may stand beside an animal ridden by a small child.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via the exit located on the east side of the ride. Please notify the Ride Operator for assistance.

MOONRAKER

This is a children's ride which rotates and rises 13 feet in the air.

Height Restriction: Maximum height limit of 54 inches.

Wheelchair Access: Entrance and Exit is via the exit gate located on the east side of the ride. Please notify the Ride Operator for assistance.

MUSIK EXPRESS

This ride has bench seat gondolas that travel along an undulating track creating a rapid up and down rider experience. Considerable centrifugal force is created by this ride. When seated, leg(s) must protrude from underneath the ride restraints and form a lap.

Height Restriction: Guests between 36 and 46 inches in height must sit on the inside seat position and be accompanied by a supervising companion in the adjacent seat.

Guests under 36 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via the exit gate located on the north side of the ride. Please notify the Ride Operator for assistance.

NUTCRACKER

Nutcracker is a breathtaking mix of powerful speed, soaring airtime, and thrilling weightlessness. Riders soar higher and higher reaching speeds wind in their face as each swing carries them over unparalleled scenic views before plunging back with a surge of adrenaline. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Guests with any type of lower prosthesis should remove their prosthesis prior to riding. When seated, leg(s) must protrude from underneath the ride restraint to form a lap. Due to the nature of the

restraint, this ride may not accommodate guests of a larger size. A test seat is located near the ride entrance which can be used to evaluate proper fit and comfort prior to waiting in line.

Height Restriction: Guests under 48 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via the exit gate and ramp located on the East side of the ride. Please notify Ride Operator for assistance.

ODYSEA

This ride has gondolas that rotate, and move up and down by a rider controlled joystick. By steering the gondola up or down, water sprays can either be hit or avoided. You may get wet on this ride! Seats are equipped with an adjustable, locking restraint to securely hold riders. Each gondola will accommodate two riders, adult or child. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 46 inches in height must sit on the inside seat position and be accompanied by a supervising companion in the adjacent seat. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance is via the main ride entrance located on the east side of the ride. Exit is via the main ride exit located on the west side of the ride. This ride is equipped with a special seat which has a detachable side. This detachable side permits a guest in a wheelchair to more easily transfer from the wheelchair to the carrier and vice versa. Please notify the Ride Operator for assistance.

PARATROOPER

Guests participating on this ride will experience gradual to extreme centrifugal forces. When seated, leg(s) must protrude from underneath the ride restraints and form a lap.

Height Restriction: Guests under 46 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via an access gate located adjacent to the exit. Please notify the Ride Operator for assistance.

Ride by Ride Information for Guests with Disabilities

PRIMORDIAL

Primordial is an interactive ride which encourages rider participation. To gain the optimal experience, 3-D glasses are provided prior to boarding the ride. A continuously moving station allows for efficient loading and unloading as riders enter and exit the vehicles from a moving conveyor. Once seated, the vehicle chassis rotates, ascends to the highest elevation, and enters the primordial world filled with scoring opportunities, theatrical lighting, fog and haze, and roller coaster elements (including quick turns and sudden drops). Depending upon factors, more than one thrilling ending is possible.

Primordial is monitored by the automatic, computerized safety system which may unexpectedly stop or slow down your vehicle on the lift hill, during the thrilling endings, or in a stopping brake throughout the ride. Please take into consideration the possibility of stopping on the lift hill, or the stopping brake in deciding whether or not to participate. It may become necessary to unload guests throughout the ride. This may include the use of lifts, ramps, ladders and stairs. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests between 36 and 48 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children. Guests under 36 inches in height may not ride.

Wheelchair Access: Entrance is via the main queue line located at the entrance to the ride. Exit is via the main ride exit. This ride is equipped with a special device that attaches to the vehicle's seat. This device gives guests using a wheelchair a way to more easily transfer from their wheelchair to the seat and vice versa. Please notify the Ride Operator for assistance.

PUFF, THE LITTLE FIRE DRAGON

This ride is a small roller coaster that runs along a steel track. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. This ride is equipped with an interim safety brake located at the beginning of the station, on the south side. It may become necessary to unload guests from the lift hill or interim brake. This may include the use of a ladder, stairs or ramps.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. There is no maximum height limit for this ride, but participating guests must fit comfortably in the seat. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via the exit ramp walkway located on the northeast side of the ride. Please notify the Ride Operator for assistance.

RATTLESNAKE RAPIDS

This ride offers an experience similar to whitewater rafting. You **WILL** get wet! Should the ride water pumps shut off, the boats will stop at the end of the ride or just before or on the lift hill. Please take into consideration the possibility of stopping on, or prior to, the lift hill when deciding whether or not to participate. It may become necessary to unload guests from the lift hill or the bottom of the lift. This may include the use of stairs, ramps, or ladders.

Height Restriction: Guests between 36 and 46 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children. Guests under 36 inches in height may not ride. No Single Riders.

Wheelchair Access: Entrance is via the main ride queue line until you reach the access gate. Your party, of up to 8 additional persons, may accompany you to the access ramp on the opposite side of the loading table. Please notify the Ride Operator for assistance.

RED BARON

This children's ride rotates and rises to a height of 12 feet. Riders may raise and lower the plane by pulling a lever.

Height Restriction: Maximum height limit of 54 inches.

Wheelchair Access: Entrance and Exit is via the exit gate located on the east side of the ride. Please notify the Ride Operator for assistance.

RED ROCK RALLY

This ride utilizes beautifully decorated, off-road themed vehicles that each seat two riders. The eight off-road vehicles run on an oval track with an exciting whip action for extreme fun.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance is via the main ride entrance located on the southwest side of the ride. Exit is via the exit gate located east of the entrance gate. Please notify the Ride Operator for assistance.

RIVETS & ROTORS

This children's ride is a children's helicopter ride showcasing meticulously designed carriers, themed with riveted panels and polished metallic accents. The ride operates on a central hub mechanism, enabling the carriers to rotate in a circular motion while simultaneously elevating and descending, reaching a maximum height of 15 feet. Riders raise and lower the carrier by pushing and pulling a control lever during the ride cycle.

Ride by Ride Information for Guests with Disabilities

(Continued from Page 12)

Height Restriction: Maximum height limit of 54 inches.

Wheelchair Access: Entrance is through the main entrance located on the northwest side of the ride. Exit is via the exit gate located just west of the ride enclosure. Please notify the Ride Operator for assistance.

THE ROCKET

This ride consists of two independent high speed vertical thrill rides. At "Blast Off," riders experience rapid vertical ascent and descent. You are launched from near ground level, reaching heights of almost 200 feet in two seconds, immediately followed by an accelerated descent. At "Re-Entry," riders are raised to the top of a tower and blasted downward in an accelerated drop. Upon nearing the ground level, the direction changes as you are launched up to near the tower top. Both towers reach high speeds and gravity forces up to 4.5 G's. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 50 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via an access queue line located at the main entrance. Please notify the Ride Operator for assistance.

ROCK-O-PLANE

This ride has cars that spin and rock as the ride turns vertically. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 50 inches in height may not ride.

Height Restriction: Guests between 36 and 46 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children. Guests under 36 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via an access gate and ramp on the south side of the ride. Please notify the Ride Operator for assistance.

ROLLER COASTER

This ride is a high speed, turbulent traditional wooden roller coaster. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. This ride is monitored by an automatic, computerized safety system, which may unexpectedly stop the train on the lift hill or in the stopping brake located at the end of the ride. Please take into consideration the possibility of stopping on the lift or in the stopping brake when deciding whether or not to participate. It may become necessary to unload

guests from the lift hill or stopping brake. This may include the use of stairs or ramps.

Height Restriction: Guests between 46 and 50 inches in height must be accompanied by a supervising companion.

Guests under 46 inches in height may not ride.

Wheelchair Access: Entrance is via the main queue line. Exit is via an adjacent ramp. Please notify the Ride Operator at the entrance for assistance.

RUKA SAFARI

Ruka Safari is a beautifully decorated ride featuring six all-terrain vehicles (ATV's). Each ATV runs on a circular track producing a unique bouncing motion.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance is via the main entrance located on the southwest side of the ride. Exit is via the exit gate located on the northeast side of the ride. Please notify the Ride Operator for assistance.

SAMURAI

This ride consists of six radial arms which spin as the entire ride rotates. As centrifugal forces increase, the entire ride rises to a near vertical position and the gathering forces allow each arm to free swing or spin, performing 360 degree rotations. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 50 inches in height may not ride.

Height Restriction: Guests 50 to 54 inches in height must ride in designated seats. Guests under 50 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via an access gate and ramp located on the west side of the ride. Please notify the Ride Operator for assistance.

SCALIWAGS

This children's ride rotates and rises to a height of 13 feet. Riders raise and lower their character themed vehicle by pushing and pulling a lever.

Height Restriction: Maximum height limit of 54 inches.

Wheelchair Access: Entrance and Exit is via the exit gate located on the west side of the ride. Please notify the Ride Operator for assistance.

Ride by Ride Information for Guests with Disabilities

SKYCOASTER (X-Venture Zone)

This attraction offers all the thrills of skydiving and hang gliding. The restraint system of the flight suit requires each flyer to be contained and restrained by both shoulder pads and at least one leg strap.

Height Restriction: Guests under 46 inches in height may not participate.

Wheelchair Access: Entrance and Exit is via an access gate located near the entrance gate. Please notify the Ride Operator for assistance.

SKY FIGHTER

This children's ride rotates and rises to a height of 6 feet.

Height Restriction: Maximum height limit of 54 inches.

Wheelchair Access: Entrance and Exit is via the exit gate located on the east side of the ride. Please notify the Ride Operator for assistance.

SKY RIDE

This is an aerial tramway ride, similar to a chair lift at a ski resort. The ride conveys guests from one end of the Park to the other. When seated, leg(s) must protrude from underneath the ride restraints and form a lap.

Height Restriction: Guests under 48 inches in height must be accompanied by a supervising companion. Supervising companion must be at least 54 inches in height or taller. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via an access gate near the exit. Guests who use wheelchairs shall expect to make a round trip in order to return back to their wheelchair. This ride does not stop during the loading/unloading process, unless requested prior to boarding. Please notify the Ride Operator for assistance.

SKY SCRAPER

The Sky Scrapper, towering 150 feet above the midway, is a Ferris Wheel type observation ride with 36 gondolas, each capable of holding up to six passengers. Each gondola has a wheel in the center which allows riders to spin their gondola in either direction. This ride may

take up to 20 minutes or more to complete.

Height Restriction: Guests under 48 inches in height must be accompanied by a supervising companion. Supervising companion must be at least 54 inches in height or taller. Parents are encouraged to ride with their children. No single riders.

Wheelchair Access: Entrance is via an access gate adjacent to the ride exit. Please notify the Ride Operator for assistance.

SPACE SCRAMBLER

This ride travels at a high speed, with extreme centrifugal forces. Due to the nature of the restraint, this ride may not accommodate guests of larger size. When seated, leg(s) must protrude from underneath the ride restraints and form a lap.

Height Restriction: Guests between 36 and 46 inches in height must sit on the inside seat position and be accompanied by a supervising companion. Parents are encouraged to ride with their children in the adjacent seat.

Guests under 36 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via an access gate adjacent to the exit located on the northeast side of the ride. Please notify the Ride Operator for assistance.

SPEEDWAY JR.

Antique miniature convertibles traverse a shady lane.

Height Restriction: Maximum height limit of 54 inches.

Wheelchair Access: Entrance and Exit is via an access gate located on the south side of the ride. Please notify the Ride Operator for assistance.

THE SPIDER

This ride is a high speed, turbulent, roller coaster with quick turns and sudden drops. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. The Spider is monitored by an automatic, computerized safety system which may unexpectedly stop your car in progress on the lift, or in one of the interim safety brakes. A safety initiated stop in the safety brakes or stopping brake at the end of the ride is an abrupt, rapid stop, similar to emergency automobile deceleration. Please take into consideration the possibility of a safety stop in deciding whether or not to participate. It may become necessary to unload guests from the lift hill or brakes. This may include the use of stairs, ramps or ladders. Due to the nature or the restraint, this ride may not accommodate guests of larger size.

(Continued on Page 15)

Ride by Ride Information for Guests with Disabilities

(Continued from Page 14)

Height Restriction: Guests between 46 and 50 inches in height must be accompanied by a supervising companion.

Guests under 46 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via the exit ramp and access gate adjacent to the exit turnstile located on the south side of the ride. Please notify the Ride Operator for assistance.

STEAMWORX

This ride puts a thrilling twist on the classic Top Spin ride with no inversions required! This 16-seat gondola consists of eight seats on each side in a back-to-back orientation and is suspended by two powerful motor-driven arms. As the gondola rocks freely, it responds dynamically to the ride's circular motion. When seated, leg(s) must protrude from underneath the ride restraint and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests between 36 and 48 inches in height must be accompanied by a supervising companion in the adjacent seat. Guests under 36 inches in height may not ride.

Wheelchair Access: Entrance is through the main entrance located on the north side of the ride. Exit is via the exit gate located just south of the ride enclosure. This ride is equipped with a special seat that has a removable side panel. This removable side panel permits a guest in a wheelchair to more easily move from the wheelchair to the carrier and vice versa. Please notify the Ride Operator for assistance.

TERRORIDE

Carriers travel through darkened halls filled with frights and surprises. This is a relatively slow and level ride, with abrupt turns.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via an access gate near the exit located on the south side of the ride. Please notify the Ride Operator for assistance.

TIDAL WAVE

This ride is a large swinging ship. As the ride increases will experience a sense of weightlessness. As the ride reaches its

vertex, the boat will swing to a near vertical position. When seated, leg(s) must protrude from underneath the ride restraints and form a lap.

Height Restriction: Guests between 36-50 inches in height must be accompanied by a supervising companion and sit in the center rows (4, 5, 6) of the boat. Guests under 36 inches in height may not ride. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via an access gate and ramp near the exit located on the east side of the ride. Please notify the Ride Operator for assistance.

TILT A WHIRL

Guests participating on this ride will experience extreme centrifugal force. When seated, leg(s) must protrude from underneath the ride restraints and form a lap.

Height Restriction: Guests under 46 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance and Exit is via an access gate and ramp near the exit turnstile located on the east side of the ride. Please notify the Ride Operator for assistance.

TIME TINKER

This ride is a captivating family-thrill ride blending high-flying excitement with mesmerizing motion. Four interlocking arms rotate in fast, smooth synchronized orbits, creating a spectacular display of movement and precision. At the end of each arm, eight gondolas keep rider upright and secure while delivering moments of exhilarating airtime as they soar over the top of the ride. When seated, leg(s) must protrude from underneath the ride restraint and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 42 inches in height may not ride. Guests between 42 and 48 inches in height must be accompanied by a supervising companion in the adjacent seat. Parents are encouraged to ride with their children. Maximum 3 large adults (661 pounds) per carrier.

Wheelchair Access: Entrance is through the main entrance located on the southeast side of the ride. Exit is via the exit gate located just west of the ride enclosure. This ride is equipped with a transfer device. This transfer device permits a guest in a wheelchair to more easily move from the wheelchair to the carrier and vice versa. Please notify a Ride Operator for assistance.

Ride by Ride Information for Guests with Disabilities

TIPSEY TEA CUPS

This is a “spin” on the classic Tea Cup ride. The platform rotates while riders may spin their cup at their own pace for a wild, dizzying, fun-filled ride. When seated, leg(s) must protrude from underneath the ride restraint and form a lap.

Height Restriction: Guests under 36 inches in height must be accompanied by a supervising companion. Parents are encouraged to ride with their children.

Wheelchair Access: Entrance is via the main entrance located on the northwest side of the ride. Exit gate on the east side of the ride. This ride is equipped with a special seat which has a detachable side. This detachable side permits a guest using a wheelchair to more easily transfer from the wheelchair to the carrier and vice versa. Please notify the Ride Operator for assistance.

TURN OF THE CENTURY

This ride consists of single and double rider swings which rise and rotate while oscillating up and down. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. Due to the nature of the restraint, this ride may not accommodate guests of larger size.

Height Restriction: Guests under 46 inches in height may not ride. Guests may not exceed 230 pounds.

Wheelchair Access: Entrance and Exit is via an access gate and ramp near the exit located on the east side of the ride. Please notify the Ride Operator for assistance.

WICKED

This ride is a roller coaster with numerous thrill elements including steep valleys, high banked turns, inversions, and more. Wicked is monitored by an automatic, computerized safety system which may unexpectedly stop or slow your vehicle during the launch, at the bottom of the launch tower, or in the interim block or stopping brake areas. Please take into consideration the possibility of stopping at the bottom of the launch tower or in the interim brakes when deciding whether or not to participate. It may become necessary to unload guests from the launch tower or interim brake. This may include the use of stairs or ramps.

Height Restriction: Guests between 46 and 50 inches in height must be accompanied by a supervising companion and may ride only in a designated seat. Guests under 46 inches in height may not ride.

When seated, both legs must extend from underneath the closed restraint and at least one leg must fit underneath the shin guard. Due to the nature of the restraint, this ride may not accommodate guests of a larger size.

Wheelchair Access: Entrance is via the main ride entrance located on the east side of the ride. When you reach the Ride Attendant at the base of the stairs, you will be directed to the access ramp and gate near the ride exit. This ride is equipped with a special seat which has a detachable side. This detachable side permits a guest using a wheelchair to more easily transfer from the wheelchair to the seat and vice versa. Please notify the Ride Operator for assistance.

Wicked utilizes electromagnetic devices. According to the U.S. Food and Drug Administration (FDA), electromagnetic interference can affect various medical devices including electronic cardiac pacemakers and implantable defibrillators. Most current research in this area focuses on high frequency sources such as cellular telephones, microwave signals, and radio and television broadcast transmitters. Wicked utilizes various sized electric motors, switches, computers, a linear synchronous motor (LSM) drive system, special eddy current brakes, and other electrical equipment that produce electromagnetic fields (EMF's). Testing has shown that these EMF's are far below the threshold limits advised by makers of medical devices and are much lower than many common household items. Each person's individual situation is different and riders with medical devices are advised to seek the medical opinion of their doctor concerning the effects of EMF's on Wicked with regard to the limits established by manufacturers of medical devices used.

WILD MOUSE

This ride is a high speed, forceful, roller coaster with quick turns and sudden drops. When seated, leg(s) must protrude from underneath the ride restraints and form a lap. This ride is monitored by an automatic, computerized safety system which may unexpectedly stop your car in progress on the lift, or in one of the interim safety brakes. A safety initiated stop in the safety brakes or stopping brake at the end of the ride is an abrupt, rapid stop, similar to emergency automobile deceleration. Please take into consideration the possibility of a safety stop in deciding whether or not to participate. It may become necessary to unload guests from the lift hill or brakes. This may include the use of stairs, ramps or ladders. Due to the nature of the restraint, this ride may not accommodate guests of a larger size.

Height Restriction: Guests between 46 and 50 inches in height must be accompanied by a supervising companion.

Guests under 46 inches in height may not ride.

Wheelchair Access: Entrance and Exit is via an access gate adjacent to the exit turnstile located on the east side of the ride. Please notify the Ride Operator for assistance.
