

BEVERLY HILLS CONCIERGE HEALTH

Redefining Luxury Healthcare Through Prevention, Precision, and Personalized Care

In a city synonymous with excellence, Beverly Hills Concierge Health is redefining what it means to invest in the ultimate luxury: your health. Located within the renowned Beverly Hills Health Center campus, the practice has become a premier destination for concierge medicine, executive health, and longevity care by combining advanced diagnostics, physician-led prevention, and personalized care coordination into one seamless healthcare experience.

Unlike traditional healthcare models that focus primarily on treating illness, **Beverly Hills Concierge Health is built on a proactive philosophy.** Every patient begins with a comprehensive baseline health assessment designed to provide a complete understanding of their current health while identifying potential risks long before symptoms develop.

Using state-of-the-art technology—including comprehensive laboratory testing, whole-body MRI, advanced cardiovascular imaging, AI-assisted brain health analysis, body composition assessments, hormone evaluations, genetic testing, and multi-cancer early detection screening—the clinical team develops a **personalized roadmap** for each patient's long-term health.

That roadmap evolves into an individualized health optimization plan focused on improving longevity, vitality, cognitive performance, metabolic health, and overall wellness. Recommendations may include lifestyle modifications, nutritional guidance, hormone optimization, regenerative medicine, IV nutrient therapies, fitness strategies, and ongoing preventive monitoring, all tailored to each patient's unique goals.

Leading the clinical vision is Dr. Ari Gabayan, Medical Director of Beverly Hills Concierge Health. A graduate of
