

# DARRICK E. ANTELL M.D. F.A.C.S.

BOARD CERTIFIED PLASTIC SURGEON

## Photo Submission Instructions

---

Get the necessary photos taken. It is imperative that you use a zoom lens with adequate lighting and a solid color background for these shots. Any camera with a zoom lens at full magnification should be sufficient for these pictures. A normal point and shoot wide angle lens will distort the area. Use a solid background with good lighting and no shadows.

See examples below so that you may accurately understand photo angles. Depending on the procedure desired, different angles and areas are required. Please follow instructions below for which angles are required for each procedure.
