Attack Surface Mapping

Unveiling Hidden Threats: The Urgent Need For Continuous ASM In Cyber Security Defense

In today's rapidly evolving cyber threat landscape, organizations must proactively defend against cyber attacks. ULTRA RED's Continuous Attack Surface Mapping addresses this need by providing a comprehensive solution to map assets and enhance security.

Understanding Continuous Attack Surface Mapping

Continuous Attack Surface Mapping empowers organizations to map assets, identify risks, and secure their attack surface. ULTRA RED's solution employs agentless discovery and categorization techniques for effortless asset identification.

Key Features

Comprehensive Asset Identification

ULTRA RED's solution enables the discovery and mapping of domains, subdomains, hosts, and networks, providing a complete asset inventory for effective risk assessment.

Monitoring & Change Detection

Real-time monitoring and automatic change detection ensure organizations stay updated on their attack surface, enabling proactive threat detection and incident response.

Account Compromise Detection & Remediation

Continuous Attack Surface Mapping identifies compromised accounts across various platforms, facilitating swift takedown and remediation actions.

Benefits

Enhanced Asset Visibility

By gaining a holistic view of the attack surface, organizations can prioritize security efforts, optimize resource allocation, and align with business objectives.

Proactive Threat Mitigation

Continuous monitoring and early vulnerability detection enable organizations to proactively mitigate threats, reducing the time to detect and respond to potential incidents.

Streamlined Remediation Processes

Swift identification and remediation of compromised accounts minimize the impact of security incidents, ensuring efficient resource allocation and reduced downtime.

Integration And Customization

ULTRA RED's solution seamlessly integrates with existing security infrastructure and offers customization options to meet specific organizational requirements.

Continuous Attack Surface Mapping empowers organizations to **proactively protect their digital assets, strengthen their security posture, and mitigate potential risks.** ULTRA RED's innovative solution provides comprehensive asset visibility, proactive threat mitigation, and streamlined remediation processes, enabling organizations to stay ahead of evolving cyber threats.
