ROOM AIR DISINFECTION

Desk H-COM with STERI-PAC

COOL-TOP₁₅ with STERI-PAC

COOL-TOP₂₅ with STERI-PAC

STERI-PAC is a powerful UV-C lamp that destroys micro-organisms such as spores, bacteria and viruses. The COOL-TOP in-desk cooling systems can be retrofitted with STERI-PAC. Desks without COOL-TOP can be equipped with a special ventilation kit with built-in STERI-PAC. The UV-C lamps are shielded and therefore harmless.

STERI-PAC is particularly effective against viruses (corona, influenza), mold spores (*Aspergillus niger*, *Aspergillus brasiliensis*) and bacteria (*E.coli*, *Listeria*). For corona-viruses, reduction rates of 99% per pass are achieved (Based on Walker 2007).

Connection

One power supply unit can supply up to two UV-C lamps with power. The UV-C light is shielded and therefore harmless to the eyes and skin.

Virus destruction with UV-C light

Viruses spread by exhalation or coughing are almost completely destroyed by the UV-C lamp built into the Steri-Pac.
