

THE ACE UP YOUR SLEEVE

for those who want a more efficient organi- zation

For most companies and organizations, transitioning to a more efficient, digital organization is a daunting and time-consuming task. That's why it's important to prioritize affordable initiatives that can easily be implemented to directly generate positive results in many areas.

Switching to Billogram's smart solution for invoices and payments is a painless way of making the digital transformation for most of your interaction with customers and simultaneously automating your own processes. The result is a more seamless experience for you and your customers, with each and every payment.

How Billogram saves you time & money

Get started right away

Implementation typically only takes 3 to 5 months, with Billogram doing most of the work itself. In fact, one of our customers in the energy sector had the service up and running after just 45 internal project hours.

Easy to integrate

Billogram connects to your ERP via API or hybrid connection, with turnkey connection solutions for all of the common ERP systems.

Future-proof today

The service has been designed for change and it is continuously being developed to meet the requirements of future consumers. For example, new distribution and payment methods are added at no extra cost, with no additional work required by you.

Get paid more, and quicker too!

Billogram's short distribution times, simple payment methods and soft reminders improve your cash flow and the reliability of your forecasts.

More control and a lighter workload

With Billogram, you can automate the processes for distribution and debt management based on own preferences. It frees up time that you can use to improve the customer experience when reminders and debt collection is necessary.

Tool for higher digitalization

Companies that use our conversion tool are able to move around 3 to 5 percent of their customers to digital distribution each month. And, during the first year, automatic payments increase by up to 50%. Customers can activate those functions directly via the invoice, which reduces erroneous payments, customer service tickets and churn.
