

*THE ACE UP YOUR SLEEVE*

# **for those who want digital transformation without a major IT project**

Typically, when organizations implement a major change, it leaves a bad aftertaste. It tends to consume a massive amount of both internal and external resources. And, by the time you're finished, the new solution might already be outdated.

Billogram has developed a smart, cost-effective, full-range solution for invoices and payments. It's easy to get started, provides you with the same control as an inhouse solution and relieves you of the burden of updates and maintenance.

## **Why digital transformation is easy with Billogram**

### **Our digital solution**

Billogram's solution is a cloud-based service that has an intuitive digital interface. The service combines customer data with smart technology, which makes it possible to predict customer needs and automate processes.

### **Easy to integrate**

Billogram connects to your ERP via API or hybrid connection. There are turnkey connection solutions for all of the common ERP systems.

### **Get started right away**

On average, implementation takes 3 to 5 months and most of the work is performed by Billogram. In fact, one of our customers in the energy sector had the service up and running after just 45 internal project hours.

### **Continuously updated**

Billogram has been designed for change and it is constantly being updated so that it remains aligned with new laws, customer requirements and preferences. It's a future-proof solution that improves over time, without any additional cost to you.

### **Tool for higher digitalization**

Companies that use our conversion tool are able to move around 3 to 5 percent of their customers to digital distribution each month.

### **Efficient conversion to automatic payments**

The invoice recipient easily switches to an automatic payment method, such as direct debit, directly via their invoice. Automatic payments helps reduce churn and during its first year with Billogram, Ownit, a company owned by Telenor, increased automatic payments among its customers by 53%.
