

# We hack cauliflower!

**Plant Jammer is looking for a front-end developer to join our team in Copenhagen.**

On November 22nd we launched our prototype on [www.plantjammer.com](http://www.plantjammer.com) with a total organic reach on Facebook of 11,171 on day 1. Now, we need you to help test, modify and develop the user experience, and in 2017 to help build a novel mobile app from scratch.

## What's our product?

We help people build their own dishes brick-by-brick, like LEGOs.

- You are tired of making the same old broccoli salad every damn time!
- We know Food Pairing. With machine learning we have built a proprietary database of the 200 things that taste well with broccoli. Our app gives you a ranked list of the best ingredients to match your broccoli: bell pepper, melon, miso, hazelnuts...
- You build your dish one matching ingredient at a time, putting you in the centre of a playful cooking experiment.
- POW! No-one ever made a broccoli-melon-miso-parsley-pine nut salad before you. And it comes with an awesome taste guarantee and bragging rights!

See our prototype on [www.plantjammer.com](http://www.plantjammer.com)

## The Plant Jammer team

We are a 6-person team representing McKinsey business acumen, Novozymes science, Le Creuset branding and computer science.

## Who are you?

A good candidate knows HTML, CSS, JavaScript coupled with experience with visual and UX/UI design. The awesome candidate takes it to the next level with experience in stuff like Progressive Web Apps (PWAs), HTML5, PhoneGap, and React Native.

We consider hiring both interns, students, and a full-time employee, possibly with equity share.

If you are also excited about hacking cauliflower, please reach out to Michael on [michael@plantjammer.com](mailto:michael@plantjammer.com) or +45 9386 4647.
