CERTIFIED CLOUD ENGINEERS

Empowering enterprises to harness the power of cloud services and build resilient infrastructures that scale.

# Transform your digital journeys with **cloud services** from Niveus Solutions

Let's take a look at the key challenges:

---

## SECURITY AND COMPLIANCE

Organizations are required to adhere to security regulations and compliances. There is also an ever increasing need for appropriate security measures to protect business-sensitive data.

## INTEGRATION

A lack of understanding or technical know-how can spell disaster for the organization when deploying cloud technology. Integrating cloud solutions with existing systems and applications, demands a thorough understanding of the organization's current architecture, as well as the ability to manage complex integrations between cloud and on-premise systems.

## VENDOR LOCK-IN

Missing out on other cloud technologies can effectively limit the cloud journey. Organizations must avoid vendor lock-in and ensure that they have the ability to move their data and applications between different cloud providers if needed, without experiencing significant downtime or data loss.

## OVERVIEW

As more and more businesses move to the cloud, award-winning Google Cloud Partners, such as Niveus Solutions play a critical role to help you deal with not just the challenges that come with a move to the cloud but also to ensure that the movement is structured and seamless.

---

## COST MANAGEMENT

Without proper monitoring, the cloud bills can be sky high. Organizations must carefully monitor their usage to avoid unexpected charges, as well as optimize their resources to ensure they are getting the most value for their investment.

## TECHNICAL EXPERTISE

The lack of technical expertise within the organization itself would make cloud deployments risky and more complicated than need-be. Organizations may need to hire additional staff or work with external partners to ensure they have the necessary skills and knowledge to effectively manage their cloud environments.

To effectively deal with these challenges, businesses are leveraging partners such as Niveus, gaining newer technologies via migrations, modernizations, and cloud integrations.

Niveus offers GCP-based solutions and services, to help businesses digitally transform cloud journey across industries and verticals.

# OUR CAPABILITIES

We provide tailored solutions for enterprises, as well as ongoing support and training, while being cost-effective. Our areas of focus include:

## INFRASTRUCTURE MODERNIZATION

Digital modernization with Google Cloud Platform (GCP) involves leveraging the platform's services and features to modernize your digital infrastructure and processes. This includes assessment and optimization of current workloads, delivering best practices and service management with GCP, as well as innovating for tomorrow.

## APPLICATION MODERNIZATION

Reinventing customer journeys with cloud and Google Cloud Platform (GCP) can be a powerful strategy for businesses looking to improve their customer experiences. Niveus leverages GCP and the extensive experience we have had with cloud, to reinvent the customer journeys for businesses with personalization, real-time engagement, omnichannel experiences, and scalability.

## DATA MODERNIZATION

Combining Data analytics and services with AI/ML (Artificial Intelligence/Machine Learning) to build a powerful solution that can help businesses gain insights, make informed decisions, and improve their operations.

## SITE RELIABILITY ENGINEERING

Building a digitally-driven organization requires a fundamental shift in the way businesses operate. It involves leveraging digital technologies to build reliable infrastructures, enhance operational efficiency, create new business models, and better engage with customers.

## SECURITY OPERATIONS CENTER

Infrastructure security is a critical aspect of any organization's IT strategy, and it becomes even more important in a cloud environment. With Niveus, businesses can rest assured that business continuity and security are a core part of our digital transformation.

# ABOUT US

As an integral part of the partner ecosystem, Niveus Solutions is empowering organizations to leverage the full potential of Cloud with Google Cloud Platform (GCP). We have the critical expertise and experience needed to help organizations design, develop, and implement solutions on GCP, in addition to providing strategic access to the latest tools and technologies available on the platform. Additionally, Niveus Solutions also provides ongoing support and training to organizations, including training on the latest tools and technologies. We also provide technical support as a part of our managed services.

# OUR SOLUTION PLAYS

## APPLICATION MODERNIZATION

- > Digital Value Chains
- > Brownfield & Greenfield – Application Development
- > Validation & Support Services
- > Customer Experience Transformation

## INFRASTRUCTURE MODERNIZATION

- > Infrastructure & Cost Optimization
- > Cloud Governance & Automation
- > Cloud Advisory Services

## DATA MODERNIZATION

- > Enterprise Data Warehouse Modernization
- > Customer 360 & Analytics
- > Intelligent Automation
- > Connected Products

# OUR PARTNERSHIPS

Niveus has progressed rapidly over the years with the company making a strategic decision in 2019 to exclusively partner with Google Cloud India, winning the **'Breakthrough Partner of the Year – Asia Pacific' award for 2020** as well as gaining specializations in Infrastructure Modernization, Application Development, and Data Management. Recently, we have also set up strategic alliances with organizations such as Hashicorp and Palo Alto to build innovative solutions together.

Our work with **HashiCorp** addresses major business challenges on cloud such as optimizing multi-cloud environments and automation, resource provisioning as well as minimizing cloud waste. Overcoming critical challenges on cloud such as idle resources, overprovisioning and orphaned resources, has become a major need among businesses and teams across industries.

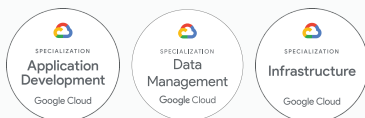

Our work with **PaloAlto** enables us to secure cloud native infrastructures and cloud native applications using a single dashboard. The solution offers comprehensive visibility and threat detection across the organization's hybrid, multi-cloud infrastructure. With Prisma Cloud, we can protect all of the cloud-based workloads and data, including applications and services hosted on all the major public clouds, including Google Cloud.
