

Do cloud right

Accelerate delivery and innovation

As organizations scale their cloud operations, they face a fundamental challenge—how to confidently innovate while maintaining efficiency and security.

The need for speed: Overcoming barriers to innovation

62%

of companies lost time-to-market due to fragmented cloud tools and missing automation ¹

85%

of organizations experience siloed teams, which is contributing to fragmented workflows and slower handoffs ²

81%

of enterprises report using multiple cloud providers, which is complicating infrastructure management ³

Empower your teams to streamline application delivery, automate workflows and standardize infrastructure across your hybrid estate.

Rapid application delivery

Accelerate time to market by providing developers with self-service automation, policy enforcement, and standardized infrastructure.

-  **Standardized infrastructure for developers**
Standardize on registries across all your environments and easily reuse all your modules.
-  **Provisioning governance**
Enable automated guardrails around provisioning for all your IaC deployments.
-  **Efficient developer access**
Automatically provide developers with consistent access to authorized resources and applications from one place.
-  **Streamlined security of CI/CD pipelines**
Integrate secret scanning within your CI/CD pipelines to actively scan for exposed sensitive information.

High velocity teams

Empower platform teams and the developers they serve with self-service infrastructure, governance automation, and centralized collaboration.

-  **No-code workflows for standardized deployments**
Accelerate onboarding, image management and application deployment with reusable, no-code modules.
-  **Provisioning workflows with policy guardrails**
Provision infrastructure through automated workflows that enforce security, cost, and compliance policies.
-  **Integrated version control for infrastructure changes**
Seamlessly connect VCS workflows to your IaC pipelines to ensure infrastructure changes are tracked, reviewed, and auditable across teams.
-  **Systematic secrets and access workflows**
Manage secrets lifecycle and human/machine access securely with integrated scanning, dynamic secrets, and standardized access patterns.

Seamless hybrid cloud automation

Reduce operational complexity and increase efficiency by standardizing workflows across hybrid and multi-cloud environments.

-  **Universal workflows across environments**
Standardize all your automation workflows across your entire hybrid estate.
-  **Cross-cloud consistency with shared modules and images**
Create consistency across all hybrid and multi-cloud IaC through a unified platform.
-  **Platform agnostic orchestration and service discovery**
Schedule and discover services automatically and easily across hybrid and multi-cloud as well as across any runtime.
-  **Centralized secrets and access management**
Create a consistent, unified experience for secrets and access management across hybrid and multi-cloud environments.

"HashiCorp helped us move seamlessly, allowing teams to focus on application development rather than cloud provisioning."

90%

of manual deployment tasks automated
