

STATE-OF-THE-ART CANCER TREATMENT

where it matters most
to your patients.

WVUMedicine.org/Cancer

THE BEST CARE AVAILABLE

Studies have shown that patients who receive treatment close to home tend to have better outcomes. We've recruited internationally recognized medical, radiation, and surgical oncologists to provide the best cancer care available to West Virginia and the surrounding areas. By forming partnerships with local hospitals and adding regional clinics and faculty members, we are better able to meet your patients' needs close to home.

LEADERS IN TECHNOLOGY AND RESEARCH

We have expertise with the most advanced cancer care technology including robotic surgery, minimally invasive surgery, radiosurgery, imaging, and pathology. We strive to provide the highest level of patient care including:

- // CAR-T therapy for select hematologic malignancies
- // Integrating palliative care services with treatment in the same clinical areas
- // Intraoperative, Lutathera, and Gamma Knife radiation
- // Genetic counseling, molecular medicine, and lung-cancer screening and survivorship programs
- // The largest clinical trials program in the state
- // The only blood and marrow transplant program in the state

REFERRAL RESOURCES

Providing patients with outstanding care and a positive experience is our goal. We will work closely to ensure your patients have a personalized plan and will work with you to provide as much care as possible near the patient's home.
