

Cambiare il clima Change the climate

A performance by Faber Teater – in English

Wednesday, September 3 , 17:30–18:30
Eurac Research – Auditorium, viale Druso 1, Bolzano

Where science meets theater to confront climate change

From monitoring alpine glaciers, exploring deep caves, studying the athletic feats of fish, testing mobile labs and rain simulators, to designing green surfaces for more resilient cities.

“Cambiare il clima – Change the Climate” is a powerful blend of theatrical storytelling and real scientific research – a unique performance that stands at the crossroads between conference and theater.

Join us on a fascinating journey founded on the work of the `climate_change@polito` project, and developed by the Department of Environment, Land, and Infrastructure Engineering at Politecnico di Torino. Through scenes, voices, and visuals, two performer-engineers, coupled with the voices of researchers, we will be guided into the heart of climate science, exploring how engineering and research are facing the most pressing environmental challenges of our time.

Originally created for Biennale Tecnologia (Biennial Technology) 2020, this performance is now live on stage, and open to the general public.
