CONCLUSION
LOW CODE COMPANY

**&
Tricks**

**Become an even
better Mendix
developer**

- How the Company Design System makes styling quicker and easier
- Shortcuts that will save you time
- Security, not flashy, but vital
- Practices to create the best microflows

Tips & Tricks

Company Design System

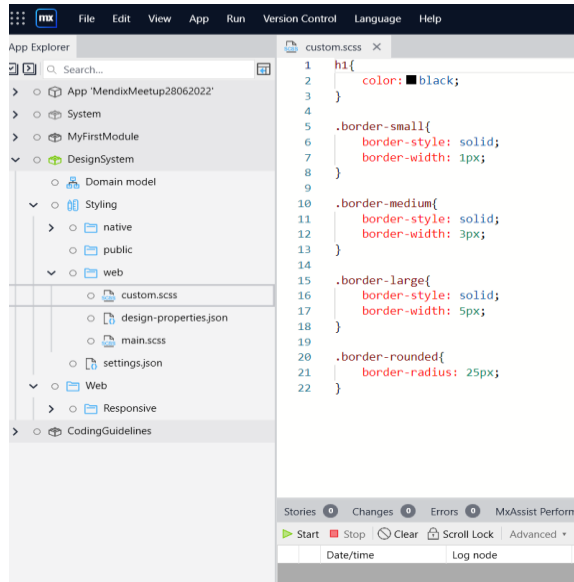

Shortcuts

Security

Best practices

Styling made easy

Tip: Create a company design system to **quickly** and **easily** build the styling of your application.

Tip: Use the Company Design System to create a **consistent** style guide throughout your application landscape

Styling made easy

Tip: Create **reusable** design properties inside your Company Design System

Medium Border

Large Border

Trick: *App* -> *Tools* -> *Batch update layouts* to **prevent errors** and save time

The screenshot shows a low-code application editor interface. The main workspace displays a page layout with a header, supporting text, and two action buttons. Below the editor, a console window is open, showing a list of 108 errors. The errors are categorized as 'Errors' and 'Deprecations'. The console window has a status bar at the top indicating '108 Errors', '0 Deprecations', and '0 Warnings'. The errors are listed in a table with columns for Code, Message, Element, Document, and Module.

Code	Message	Element	Document	Module
1 CE1613	The selected layout 'Atlas_Core.Atlas_Default' no longer exists.	Property 'Layout'	Page template 'Dashboard_Navi...	Atlas_Web_Content
2 CE1613	The selected placeholder 'Atlas_Core.Atlas_Default.Main' no longer exists.	Property 'Parameter' of content...	Page template 'Dashboard_Navi...	Atlas_Web_Content
3 CE1613	The selected layout 'Atlas_Core.Atlas_Default' no longer exists.	Property 'Layout'	Page template 'List_Filtered'	Atlas_Web_Content
4 CE1613	The selected placeholder 'Atlas_Core.Atlas_Default.Main' no longer exists.	Property 'Parameter' of content...	Page template 'List_Filtered'	Atlas_Web_Content
5 CE1613	The selected layout 'Atlas_Core.Atlas_Default' no longer exists.	Property 'Layout'	Page template 'Detail_Cards'	Atlas_Web_Content
6 CE1613	The selected placeholder 'Atlas_Core.Atlas_Default.Main' no longer exists.	Property 'Parameter' of content...	Page template 'Detail_Cards'	Atlas_Web_Content
7 CE1613	The selected layout 'Atlas_Core.Tablet_Split_Left' no longer exists.	Property 'Layout'	Page template 'Table_Detail_M...	Atlas_Web_Content
8 CE1613	The selected placeholder 'Atlas_Core.Tablet_Split_Left.Left' no longer exists.	Property 'Parameter' of content...	Page template 'Table_Detail_M...	Atlas_Web_Content
9 CE1613	The selected placeholder 'Atlas_Core.Tablet_Split_Left.Main' no longer exists.	Property 'Parameter' of content...	Page template 'Table_Detail_M...	Atlas_Web_Content
10 CE1613	The selected layout 'Atlas_Core.PopupLayout' no longer exists.	Property 'Layout'	Page template 'Form_Columns_...	Atlas_Web_Content
11 CE1613	The selected placeholder 'Atlas_Core.PopupLayout.Main' no longer exists.	Property 'Parameter' of content...	Page template 'Form_Columns_...	Atlas_Web_Content
12 CE1613	The selected layout 'Atlas_Core.Tablet_Split_Left' no longer exists.	Property 'Layout'	Page template 'Table_Form_Ma...	Atlas_Web_Content
13 CE1613	The selected placeholder 'Atlas_Core.Tablet_Split_Left.Left' no longer exists.	Property 'Parameter' of content...	Page template 'Table_Form_Ma...	Atlas_Web_Content
14 CE1613	The selected placeholder 'Atlas_Core.Tablet_Split_Left.Main' no longer exists.	Property 'Parameter' of content...	Page template 'Table_Form_Ma...	Atlas_Web_Content
15 CE1613	The selected layout 'Atlas_Core.Atlas_Default' no longer exists.	Property 'Layout'	Page template 'Grid_Tabs'	Atlas_Web_Content

Shortcuts that will save you time

Switch languages

Ctrl + L and Ctrl + Shift + L

Close pop-ups

Ctrl + Enter

Distraction free mode

Shift + F11

Dissolve and wrap containers

Right mouse click on container

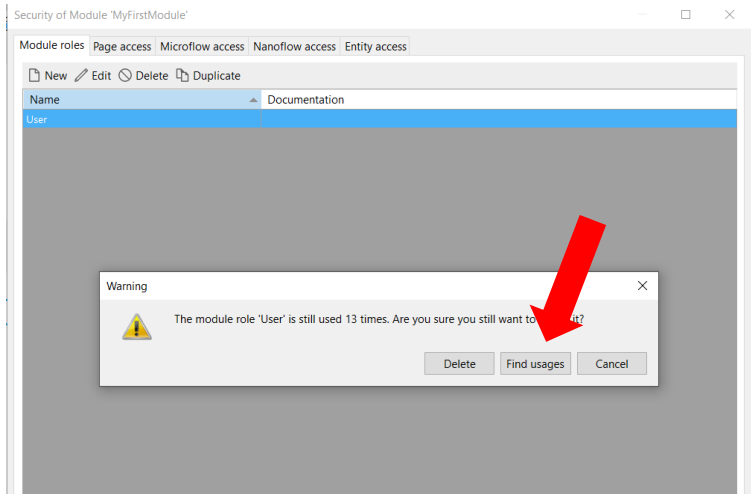

Switch branch

Manage Branch Lines

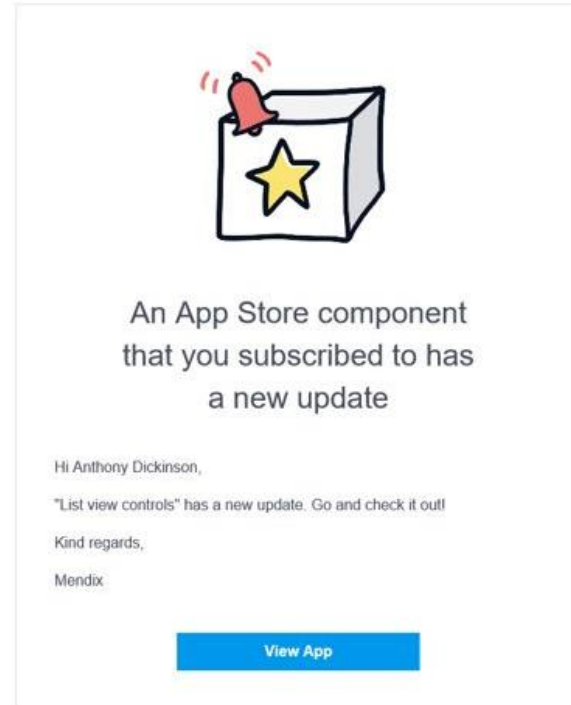

Security

Trick: Easily see which project roles have a module role assigned

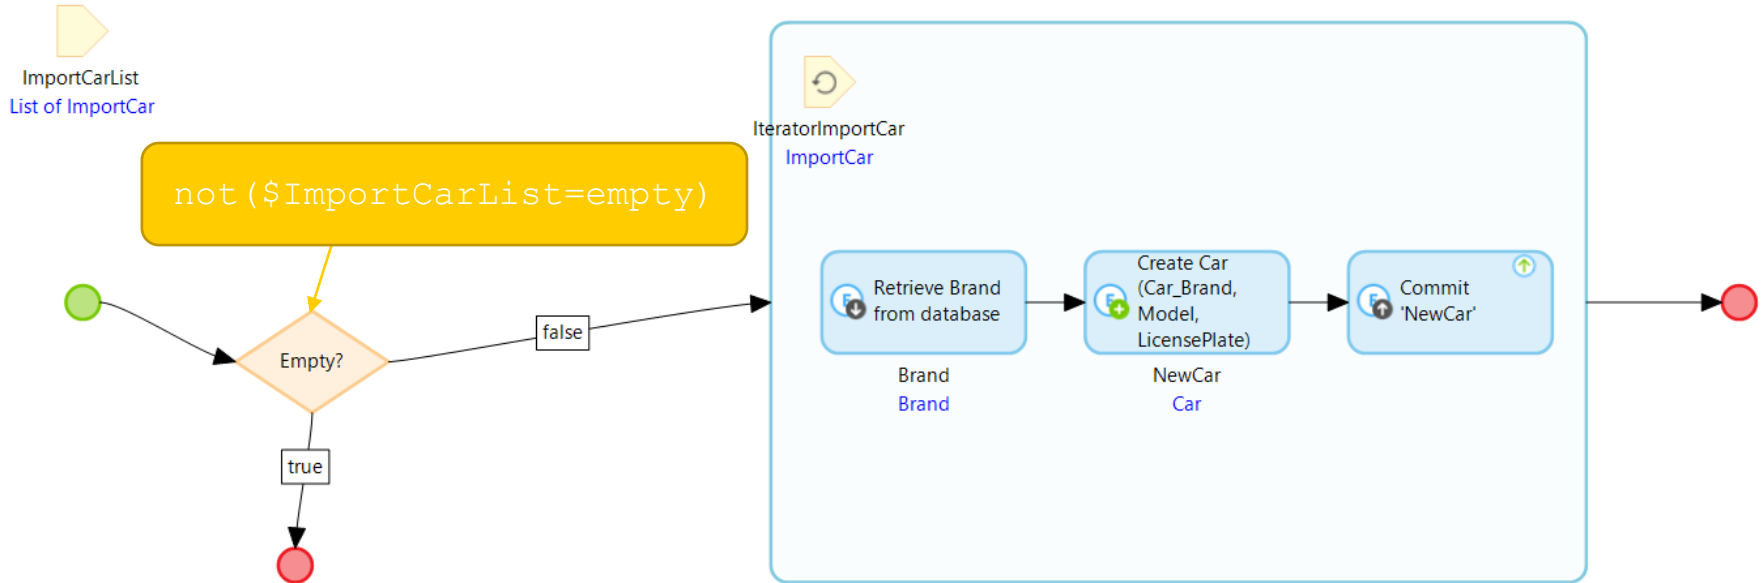

Tip: Stay updated about marketplace module upgrades

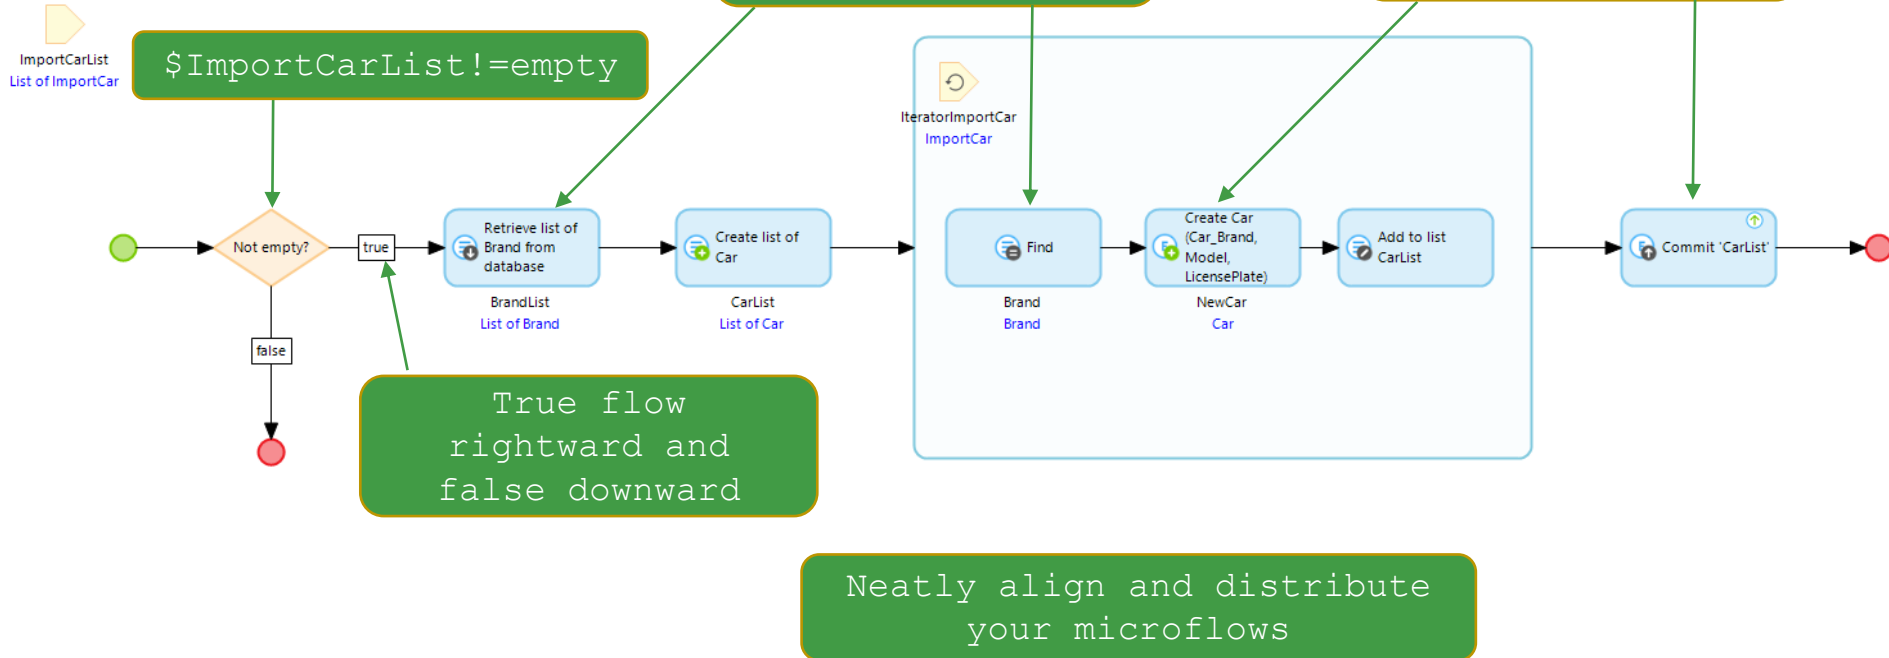

Microflow Best Practices

Microflow best practices

Case: This microflow is called from a Scheduled Event that imports a list of cars. What further improvements can be made to this microflow?

Microflow best practices

Thank you and good luck with implementing these tips & tricks!

Class ResourceBundle

java.lang.Object
java.util.ResourceBundle

Direct Known Subclasses:
ListResourceBundle, PropertyResourceBundle

public abstract class ResourceBundle
extends Object

Resource bundles contain locale-specific objects. When your program needs a locale-specific resource, a String for example, your program can load it from the resource bundle that is appropriate for the current user's locale. In this way, you can write program code that is largely independent of the user's locale isolating most, if not all, of the locale-specific information in resource bundles.

This allows you to write programs that can:

- be easily localized, or translated, into different languages
- handle multiple locales at once
- be easily modified later to support even more locales

Resource bundles belong to families whose members share a common base name, but whose names also have additional components that identify their locales. For example, the base name of a family of resource bundles might be "MyResources". The family should have a default resource bundle which simply has the same name as its family - "MyResources" - and will be used as the bundle of last resort if a specific locale is not supported. The family can then provide as many locale-specific members as needed, for example a German one named "MyResources_de".

Each resource bundle in a family contains the same items, but the items have been translated for the locale represented by that resource bundle. For example, both "MyResources" and "MyResources_de" may have a String that's used on a button for canceling operations. In "MyResources" the String may contain "Cancel" and in "MyResources_de" it may contain "Abbrechen".

If there are different resources for different countries, you can make specializations: for example, "MyResources_de_CH" contains objects for the German language (de) in Switzerland (CH). If you want to only modify some of the resources in the specialization, you can do so.

When your program needs a locale-specific object, it loads the ResourceBundle class using the getBundle method:

CONCLUSION
LOW CODE COMPANY

A repeating pattern of teal candies on a pink background. The candies are arranged in a grid-like pattern, with each candy having a small bow on top. The word "PATTERN" is centered in the middle of the image in white, bold, uppercase letters.

PATTERN

Pattern - Associations

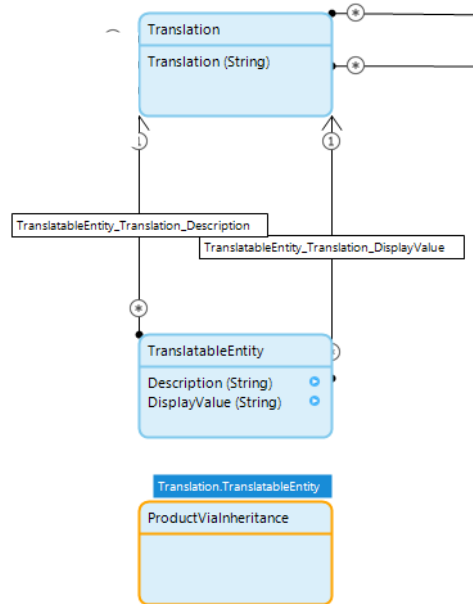

Pro's

- Data spread over multiple entities thus no one big entity with all translations

Cons

- Model virtual attribute(s) per entity

Pattern - Inheritance

Pro's

- Only two virtual attributes
- Domain model easier to read

Cons

- All translations in one big table could impact performance
- Blocks use of inheritance for other objectives

fast

Not flexible
