

INTERNATIONAL STAKEHOLDER CONFERENCE 2026

Scaling Environmental Transparency in India
& Southeast Asia

7–9 October 2026 | Delhi, India

ENVIRONMENTAL TRANSPARENCY IS BECOMING A BUSINESS IMPERATIVE

Across global markets, manufacturers, policymakers, investors, buyers, and procurement professionals are increasingly relying on credible environmental data to support business decisions, market access, regulatory compliance, and decarbonisation strategies.

ISC2026 brings together the organisations, experts, and ideas shaping this transformation through three days of knowledge sharing, practical learning, and high-level networking.

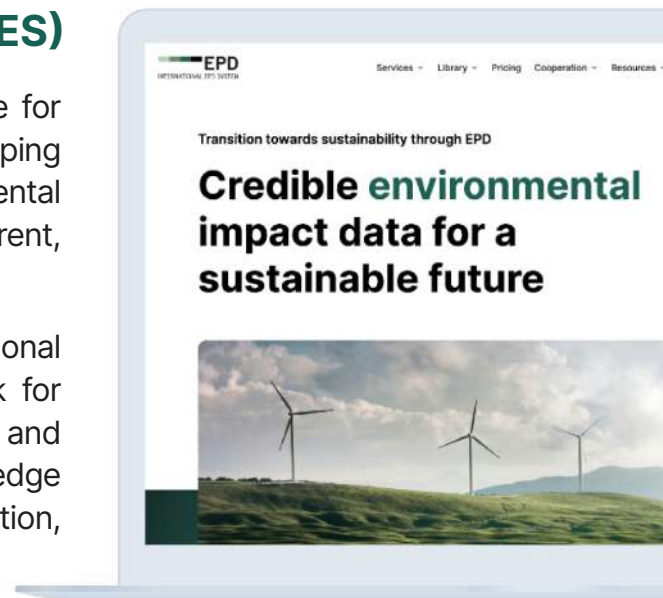

"Environmental transparency is no longer a nice-to-have. For manufacturers, exporters, and procurement teams across India and Southeast Asian region, it is rapidly becoming a condition for market access. ISC2026 exists to help organisations get ahead of that curve."

Sebastiaan Stiller, CEO, EPD International AB

THE INTERNATIONAL EPD SYSTEM (IES)

The International EPD System is a global programme for Environmental Product Declarations (EPDs), helping organisations communicate the environmental performance of products and services through transparent, verified, and comparable information.

Built on Life Cycle Assessment (LCA) and international standards, the system provides a robust framework for developing and publishing EPDs that can be trusted and used in decision-making, while supporting knowledge sharing, practical learning, practical learning, collaboration, and networking.

WHY IT MATTERS

✓ CREDIBILITY

Independent verification and internationally recognised methodologies help ensure confidence in environmental information.

✓ COMPARABILITY

Common rules and consistent methodologies enable meaningful comparison between products and solutions.

✓ TRANSPARENCY

Clear requirements, documented methodologies, and robust governance structure/framework support reliable and transparent communication.

✓ DECISION-READY INFORMATION

EPDs support real-world decisions related to procurement, sustainability reporting, investment, product development, and climate strategies.

THE INTERNATIONAL STAKEHOLDER CONFERENCE

ISC2026 is the annual flagship conference of the International EPD System.

The conference brings together manufacturers, policymakers, sustainability professionals, researchers, consultants, verification bodies, and industry leaders to exchange knowledge, discuss emerging challenges, and explore how environmental transparency can support competitiveness, innovation, and decarbonisation.

ISC2026

THE CONFERENCE EXPERIENCE

Three Days of Learning, Dialogue & Networking

DAY 1 INNOVATION SHOWCASE & NETWORKING

Discover emerging solutions, technologies, tools, and practical applications that are accelerating environmental transparency and life-cycle thinking.

HIGHLIGHTS:

- Innovation Showcase presentations
- Exhibition area
- Industry networking opportunities
- Strategic discussions
- Official opening sessions
- CSO-focused discussions and industry perspectives
- Evening networking activities

DAY 2 CONFERENCE & STRATEGIC DIALOGUE

Engage with leading experts and decision-makers through keynote presentations, panel discussions, and round table conversations, exploring the future of environmental transparency in India and Southeast Asia.

TOPICS INCLUDE:

- The business value of environmental transparency
- Sustainable procurement
- Industrial decarbonisation
- Environmental data and digitalisation
- Policy and regulatory developments
- Export competitiveness
- Verification and credibility
- LCA and EPD implementation

DAY 3 WORKSHOPS & TRAININGS

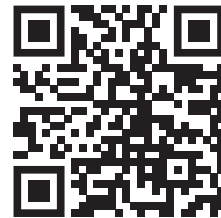

Develop practical knowledge through interactive four-hour workshops and specialised training sessions designed to support implementation and capacity building.

PROGRAMME THEMES INCLUDE:

- CBAM readiness
- Hands-on LCA implementation
- EPD development
- Verification practices
- Decarbonisation strategies
- Environmental data management
- Procurement applications

WHY INDIA? WHY NOW?

India and Southeast Asia are among the fastest-growing regions for manufacturing, infrastructure development, and international trade.

At the same time, expectations for environmental transparency, climate reporting, sustainable procurement, and carbon-related regulations are increasing across global markets.

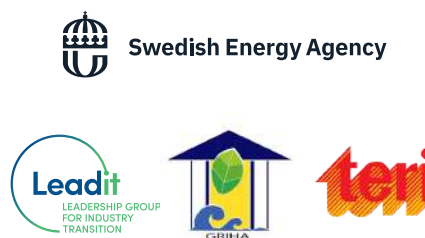

As organisations seek reliable ways to demonstrate environmental performance and strengthen competitiveness, demand for Life Cycle Assessment (LCA) and Environmental Product Declarations (EPDs) continues to grow.

ISC2026 provides a platform for organisations across the region to connect with global experts, build capacity, exchange experiences, and help shape the future of environmental transparency in Asia.
