

De mens lijdt het meest  
aan het lijden dat hij vreest

Doch dat nooit op komt dagen  
Zo heeft hij meer te dragen  
Dan God te dragen geeft.

Mensen zijn bang  
voor zaken  
waarvan ze niet  
ziek worden

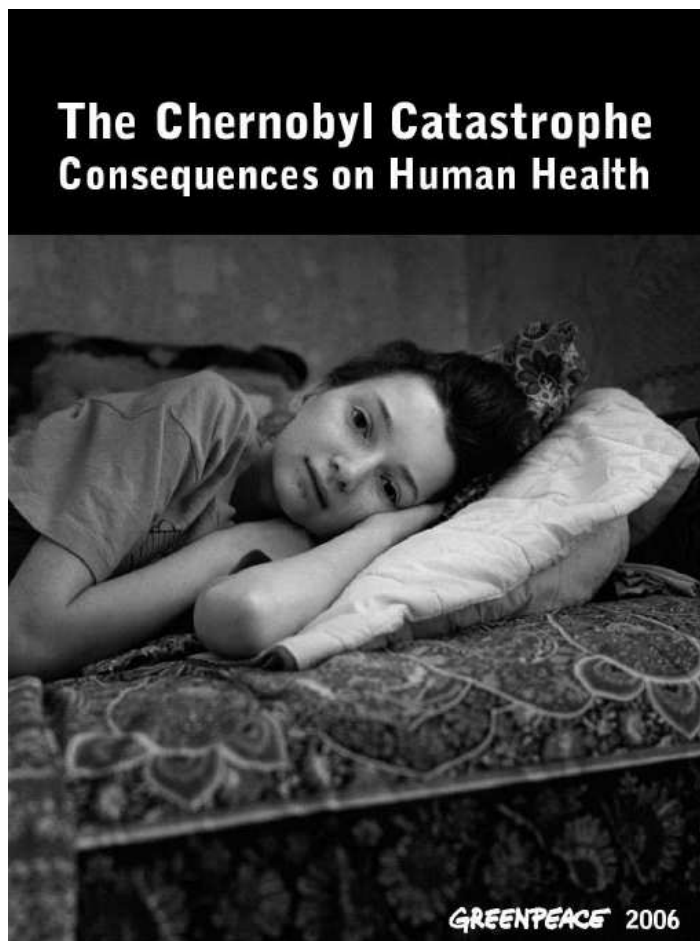

en worden ziek van  
zaken waarvoor  
ze niet bang zijn

## Chernobyl death toll grossly underestimated

Feature story - April 18, 2006

**A new Greenpeace report has revealed that the full consequences of the Chernobyl disaster could top a quarter of a million cancer cases and nearly 100,000 fatal cancers.**

In the cancer ward of a Kiev hospital in the Ukraine, 19-year-old Elena is being treated for her second case of thyroid cancer in just 3 years

Our report involved 52 respected scientists and includes information never before published in English. It challenges the UN International Atomic Energy Agency Chernobyl Forum report, which predicted 4,000 additional deaths attributable to the accident as a gross simplification of the real breadth of human suffering.

The new data, based on Belarus national cancer statistics, predicts approximately 270,000 cancers and 93,000 fatal cancer cases caused by Chernobyl. The report also concludes that on the basis of demographic data, during the last 15 years, 60,000 people have additionally died in Russia because of the Chernobyl accident, and estimates of the total death toll for the Ukraine and Belarus could reach another 140,000.

The report also looks into the ongoing health impacts of Chernobyl and concludes that radiation from the disaster has

# Gezond radon
