

Product Development Engineer

Are you an engineer and enjoys getting your hands dirty, who enjoys bringing technology to life for customers and making sure it is the right fit for them?

Description

MATTR is a fast-moving organisation operating in a new market category of verifiable data and digital trust. We do this through SaaS platform offerings that provides enterprise grade decentralised identity capabilities that support the needs of traditional organisations and a new set of web3 companies designing ground up for a decentralised future.

We are on the lookout for people that are passionate about emerging technology and thrive in fast paced environments. By joining our team, you will be helping to develop a whole new category of tools that support the next generation of the internet – the web of trust.

The [MATTR Platform](#) is designed for global scale. As a **Product Development Engineer**, you will be responsible for working with customers and the wider MATTR Labs team to understand, build and showcase MATTR’s capabilities in a way that helps establish MATTR as a leader in the world of digital trust.

Around the MATTR Platform you will foster a customer community and developer ecosystem. You will help to drive our product adoption by gathering insights and feeding them back to our community, product, and engineering teams.

LOCATION – Auckland central business district

What you will be doing

You will

- write sample code and apps, develop prototypes, author client libraries, and work with MATTR’s customers and partners
- obsess over onboarding and customer experience. You will closely work and connect with customers who are integrating or experimenting with our platform. You will seek to understand and remove any blockers, provide advice, guidance and assist with use of our platform.
- promote and advocate our technology, software adoption and best practices in a manner that non-technical people can understand.
- understand a variety of different use cases and how our technology can add business value to various industry verticals.
- occasionally contribute to open source and evolving standards
- gather insights about our products from the customer developer community and channel this information back to product and engineering teams.
- occasionally contribute to open source and evolving standards

- keep track of industry trends and develop a strong understanding of competitive products

What are the skills and requirements needed?

You will

- Have a full stack developer background with a broad understanding of many languages and frameworks. With intermediate to senior (3-5+ years) level Typescript and React Native experience
- Be able to roll up your sleeves and build prototypes, sample apps etc.
- Have excellent communication and written skills and must be able to talk about technology intelligently and passionately to all levels of an organisation including Developers, Architects and senior management (technical and non-technical).
- Have excellent presentation and story-telling skills. You will be able to develop audience-appropriate content and demonstrations for both small and large audiences.
- Love creating video content, walkthroughs and other useful collateral for developers.
- Have a strong understanding of security, reliability, scalability, and platform management topics.
- Be flexible with regards to work schedule and travel. You are comfortable working to overseas time zones.
- Have strong organisational skills. These are critical as you will have a lot of balls in the air at any one time.

Personal and work ethics

- A self-starter who takes initiative, is creative, has high energy, and would thrive in a very dynamic software company
- A team player who is eager to share their findings and contribute to a collective understanding – someone who is committed to making a difference but won't trip over their ego when they turn around!

Advantageous

- Likely have previous start-up, developer evangelism or developer advocate experience and working in open source / developer communities. Likely have experience working in a start-up or in open source / developer communities as a developer advocate / evangelist.
- Have experience with public speaking, presentations, podcasts, webinars, blog and article writing
- Understanding of Oauth2, OpenID Connect and other established authentication and identity management protocols
- Experience with SaaS services & products and promoting through a variety of channels
- Awareness of Self-Sovereign-Identity, Decentralized Identifiers and the Web of Trust ecosystem

What's in it for you?

The chance to be part of MATTR, to be surrounded by like-minded peers with no ego's, an attractive salary and flexible working arrangements, and a company that lives and breathes its values every day.
