Challenges Before greytHR

Before adopting greytHR, Magic of Wheels faced several operational hurdles that slowed down HR processes and impacted accuracy. Manual workflows, fragmented systems, and data silos created inefficiencies across payroll, attendance, and employee lifecycle management.

Time-consuming payroll

Manual validations and spreadsheet processes caused delays and errors in salary finalization and compliance.

Slow reporting and decision-making

Disconnected systems forced the HR team to compile payroll, leave, and attendance data manually, delaying insights.

Manual attendance reconciliation

Sync issues with biometric data required frequent manual intervention.

Fragmented HR workflows

Onboarding, data updates, and exits were handled across multiple platforms, causing delays and inconsistencies.

To overcome these challenges, the team needed a centralized, user-friendly solution that could streamline operations, reduce manual effort, and improve accuracy.

The Shift to greytHR: Simplifying HR, Powering Growth

Magic of Wheels implemented greytHR with a strong focus on simplifying HR operations, particularly in payroll processing and employee data management. From the start, the platform offered a smooth and intuitive experience for the HR team.

The system's ease of use and centralized controls enabled quick adoption and confident management of core HR activities. Key processes such as **payroll generation, payslip distribution, and attendance tracking were streamlined**, significantly reducing manual effort and turnaround time.

With real-time access to employee records and payroll data, administrative delays were minimized and accuracy improved. Support tickets raised through the platform were promptly addressed by the greytHR team, ensuring uninterrupted HR operations. This quick response cycle allowed the team to resolve issues efficiently and continue focusing on core activities without bottlenecks. The platform's reliability and user-friendly interface enabled independent management of HR functions, bringing greater control, clarity, and continuity to employee operations.

The greytHR Difference

The implementation of greytHR PMS brought about transformative changes in Talrop's performance management process:

Timely and Efficient Payroll

Payroll inputs are consistently locked by the 25th of each month, enabling smooth and predictable salary disbursement by month-end. With automated workflows, the team reduced payroll processing time by 45%. The cycle now takes 4.4 hours instead of 8, and PF, ESI, and TDS filings are 100 percent compliant.

Digital Attendance and Leave Management

Biometric data now syncs in real time, resolving earlier delays. Streamlined approvals and instant updates have reduced attendance reconciliation efforts by over 50 percent. Queries are closed faster, and employees have greater visibility into their records.

Centralized HR Operations

Employee onboarding, data updates, and exits are now handled within a single system. Manual follow-ups and coordination time have dropped by 60%, improving data accuracy and speeding up completion.

Improved Reporting and Insights

More than 80% of greytHR's key reports and tools are in active use. Payroll summaries, attendance reports, and leave balances are now generated instantly. Report turnaround time has reduced from 2–3 days to just a few minutes, enabling faster and more informed decisions.

“
Digital transformation with greytHR reflects its forward-thinking approach to people management. By automating payroll, streamlining attendance, and consolidating HR tasks, the company has built a solid foundation for operational agility and employee satisfaction. As the business continues to grow, greytHR will remain a trusted partner—delivering scalability, innovation, and continuous support in building a future-ready HR ecosystem.”
