

The essential shape of PACIFIC table allows it to adapt to any environment: work contexts, contract and domestic spaces. The minimal metal structure is inspired by work and drawing tables and is painted in a wide palette of colors capable of combining perfectly with the finishes of the tops. The original contoured shape of the top makes the tables extremely comfortable.

## STRUCTURE

Three are the main elements of the metal structure:

- A) Stems
- B) Spokes
- C) Crossbar

The stems are composed of a circular section tubular with a diameter of 50 mm to which the laser cut and bent upper plates are welded for fixing the top.

The lower spokes are welded to the stem and are made from 2 mm thick sheet metal. and sores in the shape of an inverted "V"; in the final part there are two solid rod cylinders welded, threaded for inserting the feet.

The crossbar is characterized by a tubular with an ovoid section and a flat base which, fixed to the stems with bayonets and dowels, stiffens and makes the whole structure load-bearing.

The frame for the 200x100 cm table. it consists of two trailing legs.

The frame for the 320x100 cm conference table. it is composed of two final legs and a central leg.

The structure is equipped with height-adjustable feet.

## TOPS

Tops are in 2 versions and can be made of HPL, Melamine and Marble

- 200x100 (one single piece)
- 320x100 (composed of the pieces each of 160x100).

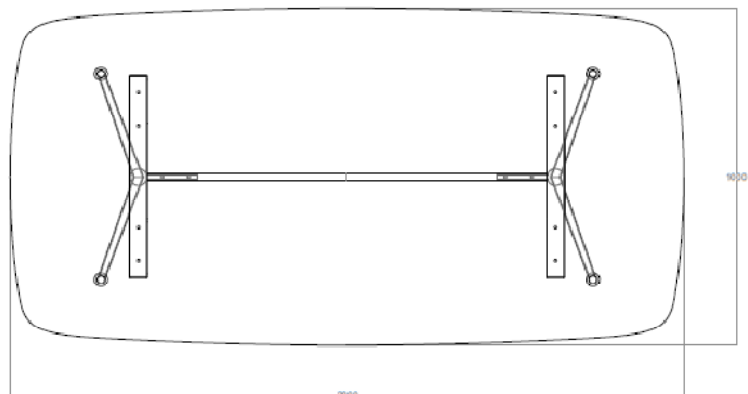

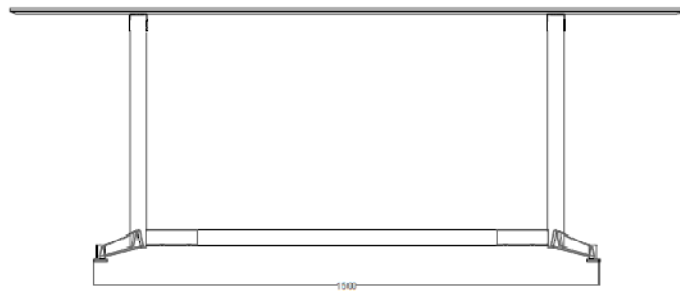

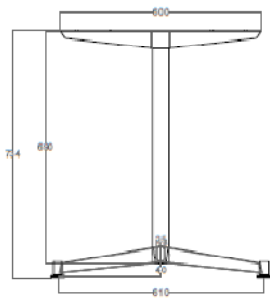

## PAINTING

The structure can be painted with all Quinti colors (that can be find at the end of the official catalogue)

The painting is made with epoxy powders and treated in the drying oven at 180 degrees.

## DIMENSIONS

- A) 200x100
- B) 320x100

## USAGE AND CARE

In order to have an optimal maintenance of the products and to preserve the characteristics of the materials by which they are made, it is recommended the following course of action.

### FABRICS

Cleaning: check the dedicated selection written on the color Swatch card.

Usage: it is recommended to pay careful attention to the fabrics as they can be cut or ripped easily.

### WOODS

Cleaning: clean using a soft cloth, soaked in tepid water. Dry always after the cleaning. Remove immediately any liquid substances or other residue in order to prevent the absorption.

Usage: wooden surfaces, being a natural material, might be subjected to color alterations with sun exposure and use over time. It is reminded that wooden surfaces cannot endure direct heat sources.

### METALS

Cleaning: both steel and aluminum surfaces, and the painted ones, have to be cleaned using a soft cloth soaked in tepid water. For the most persistent stains it is possible to dilute mild soap with water moderately. Dry always after the cleaning, using a soft cloth of deer-hide. Do not use cleaning products for steel, chlorine, bleach or other strong products. It is not recommended to use abrasive, scourers, which can scratch the metal surfaces.

Usage: pay attention to the food stains as coffee, coke, fruit juices that can make indelible marks on the surfaces.

### WARRANTY

QUINTI guarantees the products will maintain their properties for 6 years from delivery, except normal usury and provided that they will be used according to the guidelines given. QUINTI will replace, free of charge, any product found non-compliant with this warranty, without incurring any other liability of sort. Components, external accessories or materials supplied by the buyer and applied to the products in order to customize them will not be supported by the guarantee. For an optimal maintenance of the products and to keep unchanged the characteristics of the materials with which they are made, some simple attentions are necessary.
