

Ibla

**A SINGLE SHELL OF WHITE CORIAN
RECALLING SINUOUS AND DELICATE
FORMS OF ORIGAMI.**

Designed for the interior office spaces of the headquarters Salewa in Bolzano and successively utilized in the offices of La Serenissima in Milano, Ibla is a pendant luminaire for direct and indirect lighting, produced by Zumtobel,

The luminaire, obtained using a single shell of white Corian recalls the sinuous and delicate forms of an origami. The housing's contours are obtained by three-dimensional thermoforming, so that each luminaire enclosure is one of a kind. When combined with special bonding, this acrylic-based mineral material

also offers the possibility of seamlessly incorporating a micro-pyramidal optic in the housing without any visible fasteners. The design concept of the crystalline body is thus implemented to perfection.

Thanks to a reflection-intensifying coating on its internal surface, the luminaire also meets exacting luminaire efficiency requirements.

Ibla is a very good light and an outstanding piece of design when the light is off.
