

3F HD

3F HD IS A CODE NAME THAT ESTABLISHES A LINK BETWEEN RESEARCH, EXPERIMENTATION AND EXPERIENCE.

3f HD has been created starting from the desire to innovate the lighting of office spaces with a minimal, contemporary, highly technical linear system. A real need, given the increasing demand for solutions aimed at energy saving, visual comfort and current LEED and WELL certifications.

Based on linearity and balance, the 3F HD's design features a metal structure with extruded LED modules that combines great versatility and high technical efficiency. The lamps can be installed either individually or in a continuous line, although individual elements can also be assembled to form suspended lighting shapes. The purpose of the design is to make the 3F HD system as flexible as possible, thanks to the concealed joint, the different mounting systems - recessed/ceiling/suspension - and the H-shaped profile that translates into direct or direct/indirect light output and gives a 360-degree view of the lamp.

Specifically designed for installation in offices and workplaces, the new lamp is also perfectly suited to restaurants, bars, the hospitality industry and cultural spaces.
