## The status of *Julus punctatus* Say, 1821 (Chordeumatida: Cleidogonidae)

By Richard L. Hoffman

### ABSTRACT

A careful reading of the original description of *Julus punctatus* Say, 1821, shows conclusively that it is based on a species referable to the chordeumatid genus *Cleidogona*. Association with a particular species is possible only by designation of a neotype, with the vicinity of Philadelphia being considered an arbitrary but plausible type locality.
