A synopsis of the Telonychopodini, a
tribe of Pantanalian chelodesmid millepeds
(Polydesmida: Chelodesmidae)

By Richard L. Hoffman

ABSTRACT

The tribe Telonychopodini is considered to contain three genera restricted to the southern part of the Brazilian state of Mato Grosso: *Telonychopus* Verhoeff, 1951, with two species (*meyeri* Verhoeff and *klossae* Hoffman); *Manfrediodesmus* Schubart, 1949, with the single species *passarellii* (Schubart), and the new genus *Pantanalodesmus*, based on *P. marinezae*, new species from the vicinity of Poconé, Mato Grosso. Keys are provided for all taxa; male genitalia are illustrated.
