## Nesobolus and a related new genus from Haiti (Diplopoda: Spirobolida: Rhinocricidae)

By Richard L. Hoffman

### ABSTRACT

The Antillean rhinocricids thought to be referable to *Nesobolus* are listed; three Cuban species are added to the four treated by Perez-Asso in 1996, and two are deleted from the three listed for Hispaniola by Loomis (1936). The new monotypic genus *Dibothrocriscus* is proposed to accomodate *Rhinocricus maltzani* Pocock, 1894, a common Haitian species previously placed in *Nesobolus*. The species identified by Loomis as *Nesobolus indus* (Palisot de Beauvois, 1817) is renamed *Nesobolus loomisi*, as the original combination *Iulus indus* is preoccupied by *Iulus indus* Linnaeus, 1758.
