Wild Color
Dive into the color spectrum like never before as you make your way through immersive rooms, each representing a color of the rainbow. Color-saturated spaces awaken the senses with vibrant specimens, photo-worthy displays, and shifting soundscapes. Marvel at the beauty and power of color in the natural world.

**Red and Orange**

Begin your journey through the color spectrum among the rich, luxurious hues of rubies and garnets. See how nature uses vivid red in the warning colors of king snakes and velvet ants—and also how red attracts through the shades of fruits and flowers. A cornucopia of bright orange shells and birds follows.

**Yellow and Green**

Among yellow dandelions, bees, field mice, and butterflies, go ahead and “try on” butterfly wings to see how you look. This sunny space gives way to a forest of green leaves and the creatures that camouflage themselves among them.

**Ultraviolet**

Beyond the range of human sight, there’s a violet hue of greater energy: ultraviolet. Explore and compare the dramatic color shifts of animals, plants, and minerals under UV lights.

**Wildly Colorful**

The finale of specimens and media brings together the entire rainbow to answer some big questions: Why is nature so colorful at times? How can plants and animals change color? How do we make colors from nature? And how can we connect to color in nature?

**Blue and Purple**

A centerpiece of the exhibition is the blue multimedia space, where the deep blue seas and skies surround you. Investigate how birds, butterflies, and sea creatures create blue with microscopic light-bending textures, then marvel at vividly purple animals and plants.

**Black and White**

Experience the extremes of dark and light—from birds with feathers so black they absorb nearly all light, to the reflective white underside of a silver fern.
