Recent Project Activities

Special Report: The EU's position on Forestry as a CO2 removal

With a Special Report, EURACTIV analyses the progress made within the European institutions when it comes to the approval of a certification scheme for carbon removals such as the forestry sector, following the newly-finished COP27. Although an agreement could not be reached regarding the adoption of global criteria, within the EU a new law aimed at enhancing the absorption of carbon is in the works. If you want to learn more, you can read all five articles [here](#).

Life Terra celebrates the first million trees planted with Nico Rosberg

After years of work, Life Terra can officially announce that the first million of its trees has been planted! The milestone event took place on 2 December in Sardinia, together with Formula 1 world champion and sustainability entrepreneur Nico Rosberg doing the honours of the symbolic plantation. The target is now to continue growing in order to plant more all over Europe. Do you want to contribute to the Life Terra mission? You can do so by [adopting a tree](#).

Survival rate of young trees: how to improve?

Once in the ground, the Life Terra trees are not forgotten about. Periodically, the local team members come back to monitor the survival rate, to learn precious lessons on how to improve in the future. Recently, monitoring activities have been conducted in both Spain and Germany, with often contrasting results. The reasons behind the thriving or the suffering of trees planted in different places are not immediate, but they vary from climate conditions to the richness of the soil in which they are planted. If you are interested in learning more about the survival rate of the Life Terra trees, and the reasons behind it, two very insightful articles have recently been published, on the [Spanish](#) and [German](#) cases.

New video: planting with syntropic techniques

Do you know about syntropic farming techniques? Syntropic techniques allow for a more natural growth of the trees over time, but to find out all the details, we suggest you watch our most recent video, in which these principles are explained through the example of more than 1000 trees planted this way together with Life Terra.

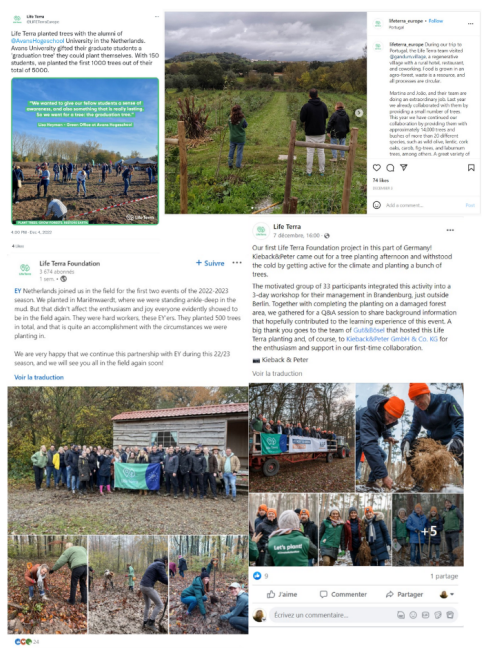

What do you think of our newsletter?

We are always looking for input to improve the content of our newsletter, to explain the mission and the progression of our project more extensively. Do you want to take a couple of minutes to give us your feedback on it? You can find the link to our survey [here](#).
