## Recent Project Activities

### EURACTIV video explainer: Europe's use of nature to combat climate change

Nature is Europe's ... well, natural ally when it comes to tackling climate change. But EU nature is in decline. So how is Europe going to revive its nature and use it to fight climate change? The most recent EURACTIV video explainer dives deep into the topic.

### Adyen and Life Terra planting 5,000 trees around the continent

The Netherlands, Spain, the UK and Germany welcomed brand new trees in the recent weeks. As part of their volunteering initiative, Adyen adopted 5,000 trees, giving their employees the chance to plant them together. The first 1,400 were put in the ground by the Adyen Dutch team in the Klarenbeek estate, while their Spanish colleagues planted 175 in Quijorna. As for the UK team, they planted +200 trees in a regenerative farm in the heart of the Cotswolds on the National Trust's Sherborne Park Estate and finally the Berlin Team completed Adyen's initiative planting more than 500 tree saplings and shrubs in the South of the city. We are thankful for this fantastic collaboration and looking forward to expand it next year! More information about our ongoing planting events with Adyen is available [here](#).

## Universitat de Barcelona students to help with tree monitoring

The bond between Life Terra and the Universitat de Barcelona keeps strengthening, as this year the university's undergraduate students will take climate action through tree monitoring. Their help will be of key importance to keep an eye on the development of the trees planted in Catalonia and to gather data on what helps or hampers their growth. Visit [this page](#) to find out more.

## Next generation climate action

To guarantee the long-term sustainability of the project's goals, Life Terra has a strong interest in involving the younger generations in its activities. Hence the education element of the project, but also several planting events tailor-made for children. Life Terra has ongoing cooperations with schools all around the continent, and more and more pupils are being introduced to treeplanting by their teachers. On our blog you can read more about our ongoing [school planting events](#).

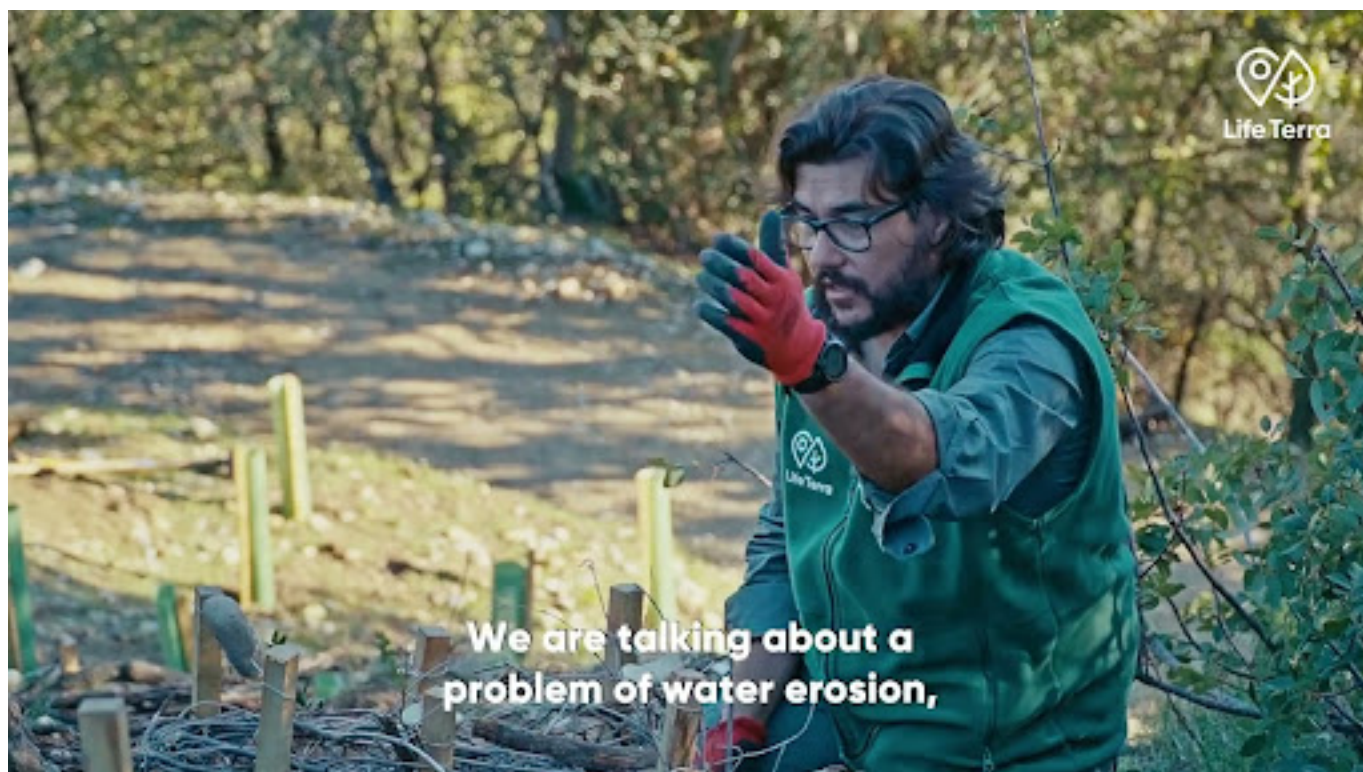

### Let's #Adopt10000trees together!

We are raising money to help finance local nature restoration projects. In this case, the money will go for the adoption of 10,000 trees planted in La Junquera regenerative farm. La Junquera farm is a regenerative agriculture project in Murcia, a region of Spain at imminent risk of desertification mainly due to climate change and past and present conventional agricultural practices. Do you want to help us? Donate [here](#).
