Recent Project Activities

Soil maintenance and preparation in the Netherlands

When not planting, Life Terra turns to checking in on our previously planted trees and to preparing the soil for future planting sessions. That's what we did recently in the Netherlands: our team visited the field where we previously planted in both the past two seasons in ['s-Hertogenbosch](#), to verify the health of our trees, then moved to a [food forest in Amsterdam](#) to clear the ground from weeds and prepare it for planting later this year. To find out more about future events, keep an eye on [our blog](#).

Demo week in Barcelona and Madrid

The 2023-2024 planting season is soon going to start. To begin the season on the right foot, Life Terra will organise two Demo Weeks, one in Barcelona and one in Madrid. Special offers are in place for companies interested in organising team building activities in the field for their employees. If you are interested in organising a day in nature for your colleagues while helping restore biodiversity, get in touch with nadia@lifeterra.eu.

Life Terra and schools, together for a greener future

Very often, Life Terra's planting events are organised together with schools. This was the case during the past planting season, in which Life Terra and the Escola Dolors Monserdà planted together twice, giving more than 50 young students the chance to

for students between the ages of 8 and 14 to learn about the environment, both inside and outside of school.

Do you want to come and plant trees with your school or know a teacher who would be interested? [Check it out.](#)

Euractiv Twitter Chat

Do you want to give your view on environmental topics to an audience of European policymakers, journalists and activists? Do you want to learn more about their views? This coming 26 October at 12.30, Euractiv's Twitter Chat will give you the opportunity to do just that. More information on the topic of the discussion is available [here](#).

In Life Terra, we collaborate with ASES On-Chain Protocol to create real offsetting with tangible benefits for the environment and provide economic revenue for landowners.

This last September, we joined efforts to visit Finca Alía, one of the plantations we are most proud of. The monitoring in Cáceres (Spain), where we measured both biomass growth and biodiversity, is one of our first steps to offer carbon removals with true beneficial impact.

lifeterra_europe 🔥 Forest fires 🔥

The summer of 2023 has been one of the harshest for Mediterranean countries, with severe heatwaves and forest fires inflicting damage to humans and natural habitats.

In Greece, more than 172,630 hectares, about 1% of Greek land, were burnt, including unique habitats and protected areas of great importance.

Our Greek beneficiary, Centre for Research & Technology Hellas (CERTH), shared with us the situation of one of the most important National Parks in Greece, the forest of Dadia, which was severely burnt this summer.

🌱 Most Involved Terra Leader 🌱

Last but not least! Last weekend Inés Domingues, Post-doc Researcher at the University of Aveiro and environmental activist, received the Life Terra Climate Action Awards in the category of "Most Involved Terra Leader".

We deeply appreciate your efforts in taking climate action and encouraging others to do it and we would like to say congratulations 🎉!

Furthermore, ANYH, Life Terra's beneficiary, took the opportunity to celebrate the #EcologyDay in Portugal with a management event and monitored the trees planted a year ago.

We hope to continue growing together 🌱🌿
