Publisher's note

After the next edition of June 2025, Euractiv will no longer be the publisher of the Life Terra newsletter, this role being taken over by the Life Terra Foundation. To continue receiving the newsletter in the future, please subscribe [here](#).

If you do not subscribe, you will no longer receive the newsletter, so we encourage you to do so!

Recent Project Activities

Planting season recap

With the arrival of Spring in Europe, our 2024-2025 planting season is coming to a close. We are overwhelmed with the results from this past season, in which Life Terra planted +100,000 trees in 30 countries. New partners from new countries also joined our mission (more on this below), helping us expand our reach and therefore have a stronger impact in restoring biodiversity around the continent.

We hope to continue making an even bigger impact all over Europe this coming fall!

Expanding our impact: Finland and Denmark

May presented the opportunity for Life Terra to participate in and promote reforestation efforts in two new countries: Denmark and Finland.

The planting events brought together local residents, students and key stakeholders to learn more about the importance of nature preservation and restoration and demonstrate the power of community-driven efforts by taking direct action in the field. On these occasions, we were lucky to collaborate with Kulosaaren Yhteiskoulu (in Finland) and Growing Trees Network Foundation (in Denmark).

You can read more about these two planting events [here](#) and [here](#).

Improved and updated information on plot monitoring

At Life Terra, to keep an eye on our trees' growth, we regularly visit the plots where we have planted. Checking the trees' survival rate helps us learn valuable lessons about the impact of weather, soil condition and animal behaviour on the growth of the various species, which we can then apply in future planting events.

You can now see more information on monitoring and the trees' survival rate in each event page. Find some examples [here](#) and [here](#).

ChangeNOW Conference in Paris

ChangeNOW is the world's largest environmental event, bringing together over 35,000 participants from 130 countries to accelerate environmental and social solutions. As one of Europe's largest climate action initiatives, we are proud to have participated in promoting innovative solutions for carbon removal and biodiversity credits and to help in the fight against climate change.

More about the event [here](#).

🌱 Planting the Future of Agroforestry in Sweden with Adyen! 🌱

Last Thursday, we had the pleasure of hosting a fantastic community tree-planting event in Munsö (Ekerö) together with our long-standing partner [Adyen](#) and our local partner [59degrees](#).

Nearly 30 volunteers from the Stockholm office joined us on site to get their hands in the soil and help plant a diverse mix of native trees and shrubs as part of a dynamic agroforestry system and a windbreak. We were lucky to enjoy a wonderful sunny day, perfect for planting and spending time outdoors in good company.

This pilot project, led by our local partner Josef Winter, is turning a degraded horse paddock into a productive and resilient food forest, serving as a replicable model for sustainable farming in Nordic climates.

🌱 A huge thank you to everyone from Adyen who came out and made this such a joyful, hands-on day. Special thanks also to Josef and the rest of the volunteers for their incredible effort and support.

And of course, no Swedish planting day would be complete without a hot dog BBQ at the end 🌭🍔

🌱 Biodiversity is returning to Lomellina 🇮🇹

Once shaped by intensive agriculture, this land is now seeing a revival thanks to @scuderia_la_colonna and students from a local school in [#Voghera](#), who joined us for two days of tree planting to help restore biodiversity to the farmland.

Guided by curiosity and care, they planted native species like dog rose, blackthorn, and bay laurel — and loved it so much, they didn't want to go back to class! 🌱🌿

Natural ecosystems work as a whole 🌿🌍

Restoring a piece of land by planting a diverse mix of tree species not only contributes to carbon capture but also impacts other ecosystem services such as biodiversity 🦋, water infiltration 💧, soil fertility 🌱 and the preservation of local fauna 🐾 and flora 🌸.

At Life Terra, we have seen a significant increase in biodiversity levels thanks to the tree-planting projects that were carried out. Like in these pictures from our project in Segovia, Spain 🇪🇸.

Carbon mitigation is essential to combat climate change, but biodiversity plays a crucial role in the success of
