

HOW TO TAG YOUR TREES

USE YOUR SMARTPHONE

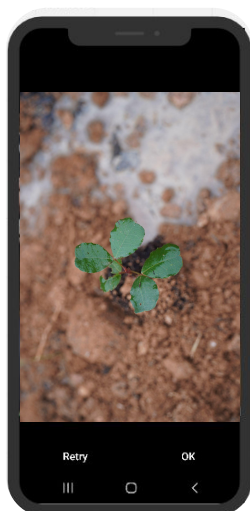

- 1.** Let's start! Scan the QR code or open the tagging link to download the event information

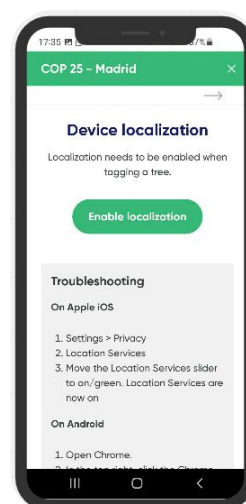

- 2.** Log in by using your email address and verify with the code that will be sent to you

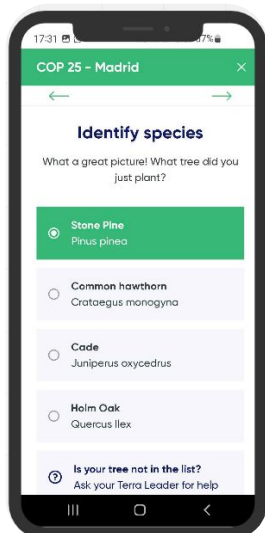

- 3.** Allow the platform to localize your device and to get access to your camera

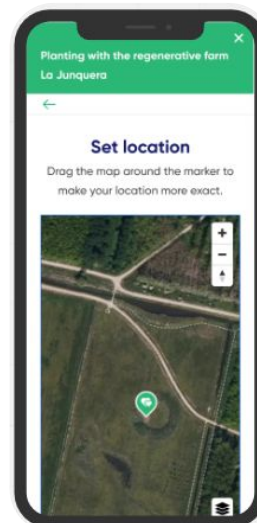

- 4.** Take a photo from your tree directly from above

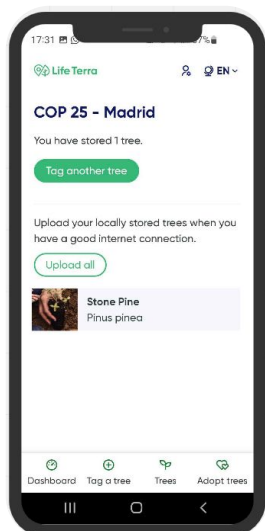

5. Identify on the list the species of your tree

6. If your location is not accurate enough adjust the location of your tree by moving the map

7. On this overview page you see all your trees. Once you have a few trees in the list, **don't forget to upload them** before you continue tagging.

Well done, you tagged and uploaded your Life Terra trees!

You can also see how to tag trees with the **Life Terra online tagging tool** by watching this [video](#).

Remember...

- **Life Terra Team** will provide you with the a **QR code with the tagging link**.
- **To tag trees**, you need to use a Smartphone (or smart device) and provide an email.
- **Before using the Life Terra online tagging tool**, remember to
 - Activate your GPS
 - Allow access to your camera
- **You can also tag offline** - download your tagging link online first!
 - It will take some space of your device's internal memory
 - Remember to "upload" all the tagged trees when you get connection
